Executive Summary

Table of Contents

1. [About MyLife Member Services Platform](#)
 - Overview of the platform and vision
2. [Market Insights](#)
 - Analysis of the market landscape, both collaborative and competitor offerings, and potential customer segments.
3. [The Problem](#)
 - Identification of the core issues and pain points that MyLife aims to address.
4. [The Solution](#)
 - Examination of the technological landscape and the tools and frameworks to be utilized.
 - Detailed description of the proposed features and functionalities of the MyLife platform
 - Includes the MVP for Alpha
5. [Requirements](#)
 - Specifications overview both technical and non-technical
6. [Challenges](#)
 - Potential obstacles and risk management strategies to overcome them.
7. [Positioning](#)
 - Comparison of use cases, pain points, and solutions to demonstrate the impact.
8. [Measuring Success](#)
 - Metrics and key performance indicators to evaluate the platform's effectiveness.
9. [Launching](#)
 - Roll-out strategy and communication plan with stakeholders and members.

This document serves as a guide for the development team, stakeholders, and contributors, ensuring a clear understanding of the project's goals and requirements as we move towards the September 1 launch of the MyLife Member Services Platform alpha version.

About MyLife Member Services Platform

Overview of MyLife

MyLife is a unique humanist nonprofit member organization dedicated to providing a durable, enduring, and free internet-based platform that allows individuals to collect and prepare their cherished personal media and information for memorial showcase, to be shared in perpetuity. MyLife's mission is to ensure that the 21st-century human is remembered forever, preserving personal stories, media, and memories through a personal lens.

Vision for the Platform

The vision of the MyLife Member Services Platform is to offer humanity a comprehensive and accessible digital platform to collect and showcase individual stories, media, and memories. This platform aims to create a living, evolving, and everlasting encyclopedia of our selves, fostering greater empathy, introspection, and interconnectivity among people. The platform's ultimate goal is to become a global public service as the canonical source for a Digital Library of Humanity.

MyLife Alpha

The alpha version of the MyLife Member Services Platform is designed to be the foundational step towards achieving our mission. This initial release focuses on capturing and preserving our living stories, wisdom, and beliefs for posterity. The alpha version includes the development of the core functionalities necessary to collect, curate, and store personal media, providing a seamless user experience for members to create their digital legacies.

The alpha version meets the mission by offering intuitive input methods, interactive content prompts, templates, and automated curation hints from metadata. This ensures that every individual, regardless of technical or literacy proficiency, can contribute to and benefit from the platform, preserving their unique stories for future generations.

- [MyLife Alpha Project Plan](#)

Purpose of This Document

This Product Requirements Document (PRD) outlines the specific requirements and goals for the MyLife Member Services Platform, with a focus on the alpha pilot version. It serves a dual purpose: to guide the development team with detailed technical and functional specifications, and to showcase to donors and the general public how the platform aligns with MyLife's nonprofit humanist mission.

The document aims to provide a comprehensive overview of the platform's intended features, functionalities, and user experience. It highlights how the alpha version will support MyLife's commitment to preserving personal stories, fostering empathy, and ensuring digital dignity for all individuals. By detailing the platform's vision, market insights, user personas, and strategic goals, this PRD demonstrates the impact and value of MyLife's initiative in creating a lasting digital legacy for humanity.

Market Insights

Collaborator Analysis

MyLife aims to collaborate with a variety of organizations that align with its mission of preserving personal stories and digital legacies while ensuring privacy, security, and accessibility. These partnerships will enhance MyLife's capabilities and reach, fostering a comprehensive ecosystem of solutions for the public digital good of all humanity.

Key Areas for Collaboration

1. [Asset Storage and Platform Hosting](#)

- *Internet Archive, Archive.org, Permanent.org*: For long-term, secure, and accessible digital preservation.
- *DANS, LOCKSS, AWS Glacier, Google Cloud Storage Archive, Microsoft Azure Archive Storage*: To ensure durable and cost-effective storage solutions.

2. Platform Security and Individual Data Privacy

- *Cloudflare, Akamai, Cisco Secure, Palo Alto Networks, Tenable, Hyperledger*: Platform-level collaborations and enhancements providing a more secure hosted environment.
- *Solid, Tor, Signal, Mozilla*: Data ownership advocates and technologies.
- *Center for Democracy & Technology, Future of Privacy Forum, International Association of Privacy Professionals*: Thinktanks to help establish ethical guidelines and responsibilities that inform MyLife Development.

3. Extensibility, Self-Hosting, Open-Source

- *Nextcloud, ownCloud, Syncthing, YunoHost, FreedomBox*: Solutions for members to host their MyLife experiences, ensuring data sovereignty and privacy.
- *Solid Project*: Technologies that give individuals control over their own data through personal online data stores (pods).

4. Human Rights & Digital Dignity

- *Human Rights Watch, Amnesty International, Witness, The Carter Center, International Federation for Human Rights (FIDH), Digital Rights Foundation (DRF), Access Now*: Organizations focusing on human rights documentation, advocacy, and support.
- *Privacy International, Tactical Tech*: Advocacy groups focused on digital rights and privacy, ensuring the protection of personal information and digital dignity.

5. Intelligence Services

- *OpenAI, Hugging Face, Allen Institute for AI (AI2), BigScience, Cohere, EleutherAI, The Foundation Model for AI (FMAI), DeepMind*: LLM-model producers offering advanced language models for enhancing MyLife's platform capabilities.
- *Mozilla Foundation*: Nonprofit initiatives focused on promoting privacy and user-centric technology solutions, supporting ethical AI integration.

6. Expiring or Retiring Digital Services

- *Google, Microsoft, Facebook, etc.*: MyLife proposes working with such entities to consensually inherit the accounts and artifacts of MyLife Members.

Asset Storage and Platform Hosting

1. Permanent.org

- **Scope**: Global
- **Overview**: Permanent.org is a nonprofit organization dedicated to providing a secure, permanent digital archive for individuals, families, and organizations. It offers lifelong preservation of digital content with a focus on privacy and ownership.

- Potential Collaboration: Collaborating with Permanent.org can provide MyLife members with a dedicated platform for the long-term preservation of their digital legacies. Permanent.org's focus on user control and privacy aligns well with MyLife's mission of digital dignity and security.

2. Internet Archive

- Scope: Global
- Overview: The Internet Archive is a nonprofit digital library that offers free access to collections of digitized materials, including websites, software applications, music, movies, and books. It aims to provide "universal access to all knowledge."
- Potential Collaboration: Partnering with the Internet Archive can ensure that MyLife's digital assets are stored securely and are accessible for posterity. Their extensive infrastructure and expertise in digital preservation can enhance the reliability and reach of MyLife's archival efforts.

3. Archive.org

- Scope: Global
- Overview: Archive.org is a well-known initiative under the Internet Archive umbrella, focusing on the preservation of various forms of digital content, from web pages to multimedia files.
- Potential Collaboration: By integrating MyLife's digital assets with Archive.org, MyLife can benefit from their robust archival systems and gain wider visibility and accessibility for the personal stories and media of its members.

4. Data Archiving and Networked Services (DANS)

- Scope: Europe
- Overview: DANS is an institute of the Royal Netherlands Academy of Arts and Sciences (KNAW) and the Dutch Research Council (NWO) that provides services for storing and sharing research data.
- Potential Collaboration: Partnering with DANS can offer MyLife a robust infrastructure for the secure storage and sharing of digital content, leveraging their expertise in data archiving and long-term preservation.

5. LOCKSS (Lots of Copies Keep Stuff Safe)

- Scope: Global
- Overview: LOCKSS is an open-source, library-led digital preservation system built on the principle that "lots of copies keep stuff safe." It allows institutions to collect and preserve their own copies of authorized content.
- Potential Collaboration: Implementing LOCKSS can provide MyLife with a decentralized, reliable method for preserving digital content, ensuring that personal stories and media are protected against data loss and unauthorized alterations.

6. Amazon Web Services (AWS) Glacier

- Scope: Global
- Overview: AWS Glacier is a secure, durable, and low-cost cloud storage service for data archiving and long-term backup. It is designed for data that is infrequently accessed and can endure retrieval times of several hours.
- Potential Collaboration: Utilizing AWS Glacier can offer MyLife a scalable and cost-effective solution for the long-term storage of large volumes of digital content. AWS's robust infrastructure can ensure data durability and security.

7. Google Cloud Storage Archive

- Scope: Global
- Overview: Google Cloud Storage Archive is a low-cost, highly durable storage service for data archiving, backup, and disaster recovery. It is designed for data that is rarely accessed and

requires long-term retention.

- Potential Collaboration: Partnering with Google Cloud Storage Archive can provide MyLife with a highly reliable and scalable storage solution, benefiting from Google's advanced cloud infrastructure and security features.

8. Microsoft Azure Archive Storage

- Scope: Global
- Overview: Microsoft Azure Archive Storage offers a secure, cost-effective, and scalable storage solution for long-term data retention and archiving. It is designed for infrequently accessed data that needs to be preserved for years or decades.
- Potential Collaboration: Leveraging Microsoft Azure Archive Storage can offer MyLife a reliable platform for archiving digital content, ensuring long-term data integrity and accessibility through Azure's extensive global network.

Privacy and Security Collaborations

To ensure the highest standards of platform security and individual privacy protections, MyLife can foster relationships with various organizations specializing in cutting-edge technologies and privacy advocacy. Here are some potential collaborators:

Enhancing Server Security

1. Cloudflare

- Overview: Provides a suite of services to improve website performance and security, including DDoS protection, secure DNS, and a Web Application Firewall (WAF).
- Potential Collaboration: Implement Cloudflare's security solutions to protect the MyLife platform from DDoS attacks, enhance performance, and secure web traffic.

2. Akamai

- Overview: Offers a wide range of cloud security services, including web application protection, API security, and bot management.
- Potential Collaboration: Utilize Akamai's comprehensive security services to safeguard MyLife's servers and ensure uninterrupted service availability.

3. Cisco Secure

- Overview: Provides a range of security products, including firewalls, intrusion prevention systems, and advanced malware protection.
- Potential Collaboration: Integrate Cisco's advanced security solutions to protect MyLife's infrastructure from cyber threats and ensure robust server security.

4. Palo Alto Networks

- Overview: Delivers enterprise security solutions, including next-generation firewalls and advanced threat intelligence.
- Potential Collaboration: Deploy Palo Alto Networks' firewalls and threat intelligence tools to enhance the security of MyLife's servers and protect against sophisticated cyber attacks.

5. CrowdStrike

- Overview: Offers endpoint protection and threat intelligence services to detect and respond to security incidents in real-time.
- Potential Collaboration: Implement CrowdStrike's endpoint security solutions to monitor and secure MyLife's servers and prevent unauthorized access and data breaches.

6. Tenable

- Overview: Provides comprehensive vulnerability management solutions to identify and address security weaknesses in IT environments.
- Potential Collaboration: Use Tenable's vulnerability management tools to continuously scan and secure MyLife's servers, ensuring they are free from exploitable vulnerabilities.

7. Hyperledger

- Overview: An open-source collaborative effort created to advance cross-industry blockchain technologies.
- Potential Collaboration: Utilize Hyperledger's blockchain frameworks to enhance data integrity, security, and transparency within the MyLife platform.

Individual Privacy Protections

1. Solid Project

- Overview: Founded by Tim Berners-Lee, Solid is an open-source project aimed at reshaping the web by giving individuals control over their own data through personal online data stores (pods).
- Potential Collaboration: Utilize Solid's data pods to allow MyLife members to store and manage their personal information securely, ensuring full user control and privacy.

2. The Tor Project

- Overview: A nonprofit organization focused on enabling anonymous communication.
- Potential Collaboration: Integrate Tor's anonymizing services to protect the identity and privacy of MyLife members, ensuring their interactions remain confidential.

3. Signal Foundation

- Overview: Develops open-source privacy technology that protects freedom of expression and enables secure global communication.
- Potential Collaboration: Incorporate Signal's encryption protocols to secure communications between MyLife members, ensuring private and confidential exchanges.

4. Mozilla Foundation

- Overview: A nonprofit organization that advocates for an open and accessible internet, promoting privacy and user sovereignty.
- Potential Collaboration: Partner with Mozilla to develop and implement privacy-focused features and policies within the MyLife platform, leveraging their expertise in privacy advocacy and user-centric technology solutions.

Privacy Advocacy and Policy

1. Center for Democracy & Technology (CDT)

- Overview: A nonprofit organization that advocates for digital rights and privacy.
- Potential Collaboration: Partner with CDT to develop and promote privacy policies that protect MyLife members' data and digital rights.

2. Future of Privacy Forum (FPF)

- Overview: A think tank focused on advancing responsible data practices.
- Potential Collaboration: Collaborate with FPF to establish best practices for data privacy and to stay ahead of regulatory changes impacting user privacy.

3. International Association of Privacy Professionals (IAPP)

- Overview: A global information privacy community and resource center.
- Potential Collaboration: Leverage IAPP's resources and network to train MyLife's team on the latest privacy regulations and technologies.

Extensibility, Self-Hosting, Open-Source

1. Nextcloud

- Overview: A self-hosted productivity platform that provides file storage, collaboration, and communication tools.
- Potential Collaboration: Offer Nextcloud as an option for MyLife members to host their own personal media and information, ensuring data sovereignty and privacy.

2. ownCloud

- Overview: An open-source file synchronization and sharing software designed for self-hosting.
- Potential Collaboration: Enable MyLife members to use ownCloud for managing and sharing their digital legacies securely and privately.

3. Syncthing

- Overview: An open-source continuous file synchronization program that synchronizes files between two or more computers.
- Potential Collaboration: Use Syncthing to offer MyLife members a decentralized and secure way to synchronize their data across multiple devices without relying on third-party servers.

4. YunoHost

- Overview: A server operating system aiming to make self-hosting accessible to everyone, with a wide range of apps including file sharing, messaging, and collaboration tools.
- Potential Collaboration: Promote YunoHost as a turnkey solution for MyLife members to self-host their digital content and applications, enhancing data control and privacy.

5. FreedomBox

- Overview: A personal server system that provides a wide range of applications for communication, publishing, and file sharing.

- Potential Collaboration: Offer FreedomBox as a device-oriented solution for MyLife members to host their personal media and information on a secure, self-managed server.

Human Rights and Digital Dignity

By collaborating with these organizations, MyLife can enhance its commitment to human rights and digital dignity, providing a secure and dignified platform for sharing and preserving personal stories and testimonies.

1. Human Rights Watch

- Overview: An international nonprofit organization that investigates and reports on human rights abuses around the world.
- Potential Collaboration: Use MyLife's platform to document and preserve personal stories of human rights violations, creating a permanent record for advocacy and awareness.

2. Amnesty International

- Overview: A global movement of people fighting injustice and promoting human rights.
- Potential Collaboration: Collaborate on projects to document and share personal stories of human rights defenders, leveraging MyLife's platform to amplify their voices.

3. Witness

- Overview: A nonprofit organization that uses video and technology to expose human rights abuses.
- Potential Collaboration: Integrate Witness's video documentation tools with MyLife's platform to create and preserve visual records of human rights violations and personal testimonies.

4. The Carter Center

- Overview: A nonprofit organization founded by former U.S. President Jimmy Carter, focusing on human rights and the alleviation of human suffering.
- Potential Collaboration: Partner with The Carter Center to use MyLife's platform for documenting personal stories related to human rights and conflict resolution efforts.

5. International Federation for Human Rights (FIDH)

- Overview: An international human rights NGO federating 192 organizations from 117 countries.
- Potential Collaboration: Utilize MyLife's platform to collect and share stories of human rights abuses, helping FIDH in its advocacy and documentation efforts.

6. Digital Rights Foundation (DRF)

- Overview: A nonprofit organization focusing on digital rights, especially for women in Pakistan.
- Potential Collaboration: Partner with DRF to ensure MyLife's platform supports the digital dignity and privacy of women and other marginalized groups, providing a safe space for sharing their stories.

7. The Internet Society (ISOC)

- Overview: A global nonprofit advocating for an open, globally connected, secure, and trustworthy internet.

- Potential Collaboration: Work with ISOC to promote policies and technologies within MyLife that protect user privacy and digital rights, ensuring an open and secure platform.

8. Access Now

- Overview: An organization that defends and extends the digital rights of members at risk around the world.
- Potential Collaboration: Integrate Access Now's digital security tools and resources into MyLife to enhance the protection of members' digital rights and privacy.

9. Article 19

- Overview: A nonprofit organization that works to protect and promote freedom of expression and information.
- Potential Collaboration: Use MyLife's platform to safeguard the stories and testimonies of individuals fighting for freedom of expression, ensuring their voices are preserved and heard.

10. Privacy International

- Overview: A nonprofit organization that defends and promotes the right to privacy across the world.
- Potential Collaboration: Collaborate to develop tools and policies that enhance user privacy on MyLife's platform, ensuring the protection of personal information and digital dignity.

11. Tactical Tech

- Overview: A nonprofit that explores the political and social role of technology in society.
- Potential Collaboration: Partner with Tactical Tech to provide MyLife members with resources and tools for maintaining digital security and privacy, particularly for those in vulnerable situations.

Intelligence Services

1. OpenAI

- Overview: A research organization dedicated to ensuring that artificial general intelligence (AGI) benefits all of humanity.
- Potential Collaboration: Use OpenAI's language models to enhance MyLife's platform with advanced natural language processing capabilities, improving the curation and organization of personal stories.

2. Hugging Face

- Overview: A company focused on democratizing AI through open-source models and datasets, with a strong emphasis on community and collaboration.
- Potential Collaboration: Partner with Hugging Face to integrate their open-source LLMs into MyLife's platform, enabling sophisticated text generation and analysis features for user content.

3. Allen Institute for AI (AI2)

- Overview: A nonprofit research institute focused on AI for the common good, advancing the field of AI through high-impact research and engineering.

- Potential Collaboration: Collaborate with AI2 to apply their cutting-edge research in natural language understanding to enhance the MyLife platform's ability to interpret and curate personal narratives.

4. BigScience

- Overview: An open research collaboration aimed at developing large language models for the public good, with a focus on transparency and inclusivity.
- Potential Collaboration: Leverage BigScience's openly developed LLMs to power MyLife's content analysis and generation tools, ensuring transparency and ethical use of AI.

5. Cohere

- Overview: A company providing NLP models and tools designed to make natural language processing accessible and useful for everyone.
- Potential Collaboration: Integrate Cohere's NLP services to enhance MyLife's platform with robust text understanding and generation capabilities, improving the user experience and data management.

6. EleutherAI

- Overview: A grassroots collective focused on advancing open research in AI, known for producing open-source LLMs such as GPT-Neo and GPT-J.
- Potential Collaboration: Use EleutherAI's open-source models to provide MyLife with powerful, transparent AI capabilities, facilitating the curation and sharing of personal stories.

7. The Foundation Model for AI (FMAI)

- Overview: An initiative aimed at developing foundation models (large pre-trained AI models) for wide accessibility and use in various applications.
- Potential Collaboration: Partner with FMAI to integrate their foundation models into MyLife's platform, enhancing its ability to analyze and generate meaningful content from user inputs.

8. DeepMind

- Overview: A leading AI research lab focused on solving intelligence to advance science and benefit humanity.
- Potential Collaboration: Work with DeepMind to apply their state-of-the-art AI research and models to improve MyLife's ability to organize and present personal narratives and digital legacies.

Expiring Digital Services

1. Google Inactive Account Manager

- Context: Allows members to manage their data and specify what happens to their account after a period of inactivity.
- *Potential Collaboration:* Partner with Google to transfer inactive account data to MyLife for preservation, ensuring personal stories and legacies are not lost.

2. Yahoo Account Deletion Policy

- Context: Yahoo deletes accounts after a period of inactivity, which includes the data and content within those accounts.
 - *Potential Collaboration*: Collaborate with Yahoo to offer members the option to migrate their data to MyLife before deletion, safeguarding their digital legacies.
3. Microsoft Account Closure Policy
- Context: Microsoft closes and deletes accounts after a period of inactivity.
 - *Potential Collaboration*: Work with Microsoft to provide a seamless transfer of inactive account data to MyLife, ensuring that important documents and personal stories are preserved indefinitely.

Competitive Analysis Summary

While MyLife doesn't necessarily see the technology ecosystem as having competition, it is crucial to recognize the key areas where for-profit entities overlap or potentially undermine MyLife's mission. This analysis helps in identifying industries and context spaces where competitive intervention or reproduction could impact MyLife's success. By understanding these areas, MyLife can strategically position itself to highlight its unique value proposition and ensure the long-term preservation of personal stories and digital legacies.

Key Areas of Competition

1. Genealogy and Family History Services
 - *Ancestry.com, 23andMe*: Companies providing comprehensive genealogy services and DNA testing to build detailed family trees. These services overlap with MyLife's mission to preserve personal stories and family histories, potentially reducing MyLife's unique value proposition.
 - *Key Weaknesses*: Cost barriers, privacy and data ownership concerns, low emotional stakes, commercial interests, limited collaboration and community, and no continuity plan.
2. Digital Avatars and Virtual Assistants
 - *Google Private Intelligent Avatars, Apple Memoji/Animoji*: Development of AI-driven avatars for personal and professional use, enhancing user interaction and personalization. These technologies could replicate MyLife's efforts to create digital representations of individuals, potentially overshadowing MyLife's personalized and humanistic approach. Corporate stamp as opposed to personal commitment.
 - *Key Weaknesses*: Personalization limitations, Cost barriers, privacy and data ownership concerns, low emotional stakes, commercial interests, limited collaboration and platform lock-in, and no continuity plan.
3. Aftercare and Remembrance Applications
 - *HereAfter, Eternos.life, You Only Virtual*: Startups that occupy the remembrance space directly intending to leave behind a connectable avatar of yourself. We would be quite capable of offering them connectivity, as their products generally are in pursuit of individuals willing to pay for their legacy, but without any place to *put* them, but to hope everyone continues to pay for this particular service?
 - *Key Weaknesses*: Cost barriers and commercial motives, privacy and data ownership, limited personalization, limited community and collaboration, and no corporate longevity plans.
4. Cloud Storage
 - *Google Drive, Dropbox*: Cloud storage services focusing on convenience and accessibility without a focus on long-term preservation. These services lack the permanence and legacy focus of

MyLife, but their widespread adoption could divert users from MyLife's mission-centric platform.

- *Key Weaknesses:* Lack of Long-Term Preservation Focus, Cost and Subscription Model, Data Control and Ownership, Impersonal Experience, Platform Dependence and No Narrative or Curation Tools.

5. Social Media Platforms

- *Facebook, Instagram:* Platforms that allow users to share and document their lives through posts, photos, and videos. These platforms compete with MyLife's mission to curate and preserve personal stories, especially with features that capture and share personal narratives.
- *Key Weaknesses:* Lack of Long-Term Preservation, Privacy and Data Security Concerns, Limited Control Over Content, Commercial Focus on Engagement, No Truth-Seeking Mechanics, Fragmented and Unstructured Memories, Content Moderation and Censorship and Platform Dependence.

Genealogy and Family History Services

When comparing MyLife's platform offerings with the infrastructure of for-profit genealogical services, we find the following high-level key weaknesses:

1. Cost Barriers

- *High Subscription Fees:* For-profit genealogy platforms often require expensive subscriptions or one-time payments for access to comprehensive features and historical records, which can be a barrier for many users.
- *Additional Costs for Premium Features:* Many platforms charge extra for premium features such as advanced DNA testing, detailed family history reports, and access to exclusive databases.

2. Privacy Concerns and Limited Data Ownership

- *Data Security Risks:* Users may be wary of potential data breaches that could expose sensitive personal information and genetic data.
- *Ownership of Data:* Questions about who owns the genetic and genealogical data can deter users, as companies may have policies that allow them to use or share data with third parties.
- *Restricted Data Access:* Users may have limited control over how their data is used and shared, leading to concerns about data privacy and consent.
- *Difficulty in Data Portability:* Exporting data to other platforms or services can be challenging, making it hard for users to move their information if they decide to switch services.

3. Limited Engagement and Emotional Connection

- *Lack of Personal Narratives:* These platforms primarily focus on building family trees and genetic information, often neglecting the personal stories and experiences that give context and richness to family histories. Content is produced as assets, not evolving memory-narratives.
- *Automated Content Generation:* The reliance on automated data collection and analysis can lead to impersonal and less meaningful connections compared to user-generated content.
- *Impersonal Experience:* The process of building a family tree or analyzing DNA results can feel transactional and lack emotional engagement, making it less appealing for users looking for a deeper connection to their heritage.
- *One-Size-Fits-All Approach:* For-profit platforms often use standardized tools and reports that may not fully capture the unique aspects of individual family histories and personal stories.

4. Commercial Interests

- *Profit-Driven Motives:* The primary focus on profitability can lead to decisions that prioritize revenue over user experience and satisfaction.

- Advertising and Upselling: Users may be subjected to constant upselling and advertisements, detracting from the overall experience and making it feel more like a commercial service than a personal journey.
5. Lack Community and Collaboration
- Isolation of Users: These platforms may lack robust community features that enable users to collaborate and share stories with others, reducing opportunities for meaningful interactions and collective memory preservation.
 - Fragmented Information: Without strong community tools, information may remain fragmented, with users missing out on the collective knowledge and experiences of a broader network.
6. Longevity and Continuity
- Dissolution Plan: For-profit platforms may not have a clear or user-centric dissolution plan. In the event of company closure, users might lose access to their data, and there may be no straightforward way to transfer or preserve their information.

Here are MyLife's primary competitors in this area.

1. Ancestry.com

- *Context*: Provides comprehensive genealogy and DNA testing services, allowing users to build detailed family trees.
- *Impact*: Overlaps with MyLife's mission to preserve personal stories and family histories, potentially reducing MyLife's unique value proposition.

2. 23andMe

- *Context*: Offers genetic testing and ancestry services, providing users with personal and familial insights.
- *Impact*: Competes with MyLife's focus on preserving personal legacies and family histories, especially through genetic data.

Digital Avatars and Virtual Assistants

When comparing MyLife's platform offerings with the infrastructure of for-profit digital avatars and virtual assistants, we find the following high-level key weaknesses:

1. Limited Personalization and Depth

- Generic Customization: While these platforms offer customization options, they often lack the depth of personalization that MyLife provides. The focus is usually on appearance and basic interactions rather than capturing the full essence and life stories of individuals.
- Superficial Interactions: Interactions with these avatars can be superficial, focusing on entertainment or convenience rather than meaningful engagement and personal connection.
- Standardized Experiences: The experiences provided by these corporate avatars are often standardized, lacking the unique, personalized touch that comes from MyLife's humanistic approach.
- Productivity: Most of these avatars are geared towards productivity, though both professional and personal. By contrast, MyLife's avatars represent the full scope of your person *while* providing members with utility and productivity features.

2. Cost Barriers

- Premium Pricing: Advanced features and customizations often come at a premium, making full access expensive for users. This can create barriers for those who cannot afford to pay for enhanced services.

- **Device Dependency:** Some features may be limited to specific devices or platforms (e.g., Apple Memoji on iPhones), restricting accessibility for users across different ecosystems.

3. Privacy Concerns and Limited Data Ownership

- **Data Control Issues:** Users may have limited control over their data, with companies retaining the rights to use, share, or monetize it. This can lead to privacy concerns and reluctance to share deeply personal information.
- **Potential for Misuse:** The data collected by these platforms could be used for targeted advertising or other purposes that may not align with the user's intentions or comfort.

4. Limited Engagement and Emotional Connection

- **Impersonal Interactions:** The interactions with corporate avatars can feel impersonal and automated, lacking the warmth and authenticity that comes from genuine personal stories and experiences.
- **Entertainment Over Substance:** Many features are designed for entertainment (e.g., emojis, animations) rather than fostering deep emotional connections and preserving meaningful memories.
- **Temporary Engagement:** Corporate avatars are often designed for short-term engagement and novelty rather than long-term preservation of personal histories and legacies.
- **Ephemeral Content:** The focus on trendy features and frequent updates can result in ephemeral content that does not contribute to lasting memories or legacy building.

5. Commercial Interests

- **Commercial Objectives:** The primary goal of these platforms is to drive user engagement and revenue, rather than preserving personal legacies. This commercial focus can detract from the personal and emotional value that MyLife offers.

6. Lack Community and Collaboration

- **Isolation of Users:** These platforms may not offer robust community features for users to share and collaborate on memories, reducing opportunities for collective storytelling and connection.
- **Lack of Shared Spaces:** Without shared digital spaces, users miss out on the collective knowledge and experiences of a broader network, unlike MyLife which encourages community engagement.
- **Platform Lock-In:** Users may become locked into a specific ecosystem (e.g., Google, Apple) with limited ability to transfer their avatars and data to other platforms. This dependency can be restrictive and limit user freedom.
- **Compatibility Issues:** Interoperability between different devices and platforms can be problematic, leading to fragmented user experiences.

7. Longevity and Continuity

- **Uncertain Longevity:** The long-term viability of these platforms is uncertain, as they are subject to corporate decisions and market changes. If a platform is discontinued, users may lose access to their avatars and data.

Here are some market comparisons

1. Google Private Intelligent Avatars

- **Context:** Develops AI-driven avatars for personal and professional use, enhancing user interaction and personalization.
- **Impact:** Could replicate MyLife's efforts to create digital representations of individuals, potentially overshadowing MyLife's personalized and humanistic approach.

2. Apple Memoji/Animoji

- **Context:** Provides users with customizable digital avatars for communication and entertainment.

- *Impact:* While primarily focused on social interaction, these avatars could evolve to capture personal stories and memories, encroaching on MyLife's domain.

Aftercare and Remembrance

MyLife identifies the following key weaknesses in these models:

1. Cost Barriers and Commercial Motives

- **High Initial and Ongoing Fees:** Many of these services, like Eternos.life, require significant upfront costs and annual fees, making them less accessible to a broader audience.
- **Premium Pricing Models:** Features such as custom voices, interactive biographies, and advanced AI functionalities often come at a premium, limiting access for users who cannot afford the higher costs.
- **Subscription Dependency:** Users must continuously pay to maintain access to their digital legacy. This dependency can be a significant financial burden and may deter long-term commitment.
- **Risk of Service Discontinuation:** If users stop paying the subscription fee, they may lose access to their preserved memories and data, which undermines the premise of an eternal digital legacy.
- **Commercial Motivations:** The primary focus on profit can lead to decisions that prioritize revenue over user experience and satisfaction. This corporate approach may detract from the personal and emotional value that users seek.

2. Privacy and Data Ownership

- **Data Security Concerns:** Users may have reservations about how securely their personal and sensitive data is stored, especially given the intimate nature of the information.
- **Ownership and Control:** For-profit companies may retain certain rights to use or monetize user data, leading to concerns about privacy and control over personal information.

3. Limited Personalization and Depth

- **Surface-Level Customization:** While these platforms offer some customization, they often do not capture the full depth of an individual's life story and essence. The focus is on creating a digital likeness rather than a comprehensive personal narrative.
- **Automated Content Generation:** Reliance on automated processes can result in less meaningful and authentic interactions compared to those generated by personalized human input.
- **Temporary Engagement:** Many features are designed for short-term engagement and novelty rather than fostering long-term preservation of personal histories and legacies.
- **Ephemeral Content:** The focus on trendy features and frequent updates can lead to ephemeral content that does not contribute to lasting memories or legacy building.
- **unimaginative playback mechanics unlike MyLife shared experiences**

4. Limited Community and Collaboration

- **Isolation of Experiences:** These platforms often focus on individual preservation rather than fostering a sense of community or collective memory. Users miss out on shared experiences and the collective wisdom of a broader network.
- **Lack of Shared Spaces:** Without robust community features, the information remains fragmented, reducing the opportunities for meaningful interactions and connections with others who share similar experiences.

5. Longevity and Dissolution Plan

- **Presumed Dissolution Plan:** For-profit platforms often do not have a clear or user-centric dissolution plan. Users might lose access to their data if the company goes out of business, with no straightforward way to transfer or preserve their information.

- Uncertain Longevity: The long-term viability of these startups is uncertain, as they are subject to market conditions, funding challenges, and potential acquisition. Users may fear losing access to their data if the company shuts down.
- No Clear Dissolution Plan: Many for-profit platforms lack a transparent dissolution plan to ensure the preservation of user data. Users risk losing their digital legacy if the company ceases operations.

This list of direct competitors in the aftercare and remembrance space was compiled by @sheikita.

- [Memory Lane Games](#)

- Application: This startup uses GenAI to create personalized games for people with dementia. The games are designed to trigger positive memories and improve social interaction between patients and caregivers.
- Technology: They use AI to generate over 3,200 simple, engaging games tailored to each individual's memories and experiences, aiming to improve communication and happiness among users.
- *Memory Care App* is designed for people living with dementia and their caregivers. Improves communication, calms, distracts and makes people laugh! Reconnects people with what they enjoyed in their life and bridges generations.
- [MyLife Competitive Review](#)

- [Inqli](#)

- Application: Although not directly focused on memory preservation, Inqli's AI-powered knowledge-sharing platform connects users with people who have firsthand experience. This concept can be adapted to capture and share personal memories interactively.
- Technology: The platform leverages AI to match questions with relevant personal experiences, potentially preserving and sharing memories in a more engaging manner.
- IMPROVING BUSINESS IMPACT AND EMPLOYEE WELL-BEING BY DEMOCRATIZING ACCESS TO KNOWLEDGE WITH PURPOSEFUL TECH
- At MyLife, the professional self is one of the things we believe maintains our core or secondary identities for many of us, so integration with platforms that recognize the humanness of the work we do shall be critical. We see great potential alliance with this mechanic of thinking, and pricing negotiations could be shared by ai's that are providing the content awareness and subject matter excellence of our membership.
- [MyLife Competitive Review](#)

- [Here After](#)

- Application: An app that interviews users about their life, capturing audio recordings and photos.
- Technology: Uses a virtual interviewer and AI to organize and present memories interactively.
- Your stories and voice. Forever.
- [MyLife Competitive Review](#)

- [Silicon Intelligence](#)

- Application: This company specializes in developing AI chatbots that mirror deceased individuals using their appearance and voice. These AI-driven replicas, often referred to as 'deadbots,' are trained on vast language datasets to create digital likenesses of lost loved ones, offering companionship and aiding in the grieving process.
- Technology: Utilizes advanced generative AI technologies like Baidu's Ernie and OpenAI's ChatGPT to create lifelike avatars based on clients' narratives and memories.

- cannot determine if scam or not; primary mechanic would be through voice replication and human-generated content capital
- [You, Only Virtual](#)
 - Application: Founded by Justin Harrison, this startup creates chatbots modeled after deceased loved ones. The AI-driven chatbots can communicate with users through written chats or audio responses that mimic the deceased relative's voice, aiming to redefine how people deal with grief.
 - Technology: Scans communication records such as text messages, emails, and phone calls to create a chatbot capable of generating original responses. The company plans to offer video-chat capability and augmented reality interactions in the future.
 - A *Versona* is highly advanced AI that allows the conversation to keep going forever. The most important thing about creating a Versona is making and storing the data now. Every day our technology gets better and we're able to offer more. Right now you can text and hear their voice but very soon you'll be able to video chat and even sit in the same room and converse via augmented reality.
 - [MyLife Competitive Review](#)
- [Eternos.life](#)
 - Application: This startup helps terminally ill individuals create digital replicas that capture their voice, personality, and memories. These digital personas allow family members to interact with the deceased's digital self after their passing.
 - Technology: Integrates advanced technologies for data capture, transcription, and chat functionalities. The AI processes life stories and core values to generate responses, and future plans include integrating photographs and videos into a cloud-based platform
 - A comparatively deep team worth connecting with.
 - [MyLife Competitive Review](#)

Cloud Storage

MyLife has identified the following key weaknesses for this sector of competition.

1. Lack of Long-Term Preservation Focus

- Temporary Storage Solution: These platforms are designed for convenience and accessibility rather than permanent preservation. They do not prioritize long-term data integrity and legacy preservation.
- No Legacy Services: They lack features specifically tailored for preserving personal legacies and memories over extended periods, focusing more on file storage and sharing.
- Risk of Deletion: Data can be accidentally deleted or lost due to user error or platform issues, and recovery options may be limited.
- Service Limitations: These platforms may have limitations on file types, sizes, and the number of files that can be stored, affecting the completeness of data preservation.

2. Cost and Subscription Model

- Recurring Costs: Users must pay ongoing subscription fees to maintain access to their storage. Failure to continue payment can result in loss of access to stored data.
- Additional Charges for Extra Storage: Users often face additional costs if they exceed their storage limits, which can become expensive over time, especially for large amounts of data.

3. Data Control and Ownership

- **Third-Party Access:** Corporate policies may allow for data access by third parties or for advertising purposes, raising privacy concerns.
- **Limited User Control:** Users may have limited control over their data, with the platforms retaining certain rights to use or manage the data as they see fit.
- **Data Portability Issues:** Transferring data to another platform can be challenging and time-consuming, making it difficult for users to switch services or back up their data.

4. Impersonal Experience

- **Lack of Personalization:** These platforms are not designed to capture and preserve the personal stories and memories that make up an individual's legacy. They provide a generic storage experience without emotional or historical context.
- **No Community Features:** There are no built-in community features to share and collaborate on memories, reducing the opportunity for collective storytelling and engagement.
- **Not Designed for Posterity:** The primary focus is on immediate data accessibility and convenience rather than ensuring data longevity for future generations.
- **Frequent Updates and Changes:** Continuous updates and changes to the platform can affect data access and user experience, potentially disrupting long-term storage plans.
- **Profit-Driven:** The primary goal is to generate revenue, which can lead to decisions that prioritize profit over user satisfaction and data security.
- **Advertising and Monetization:** Users may be subjected to targeted advertising or other monetization strategies, detracting from the overall experience.

5. Platform Dependence

- **Reliance on Continuous Service:** Users are dependent on the ongoing availability of the service. If the service discontinues or changes its terms, users may struggle to access their data.
- **Compatibility Issues:** Data compatibility with other platforms can be an issue, making it difficult to transfer or utilize the data across different services.

6. No Narrative or Curation Tools

- **Unstructured Storage:** These platforms do not provide tools for organizing and curating personal narratives and stories, resulting in a collection of disorganized files rather than a coherent legacy.
- **No Interactive Features:** They lack interactive features that can engage users in preserving and sharing their memories in meaningful ways.

There are many players in this space currently, none AI-enabled.

1. Google Drive

- *Context:* Offers cloud storage services for individuals and businesses, focusing on convenience and accessibility.
- *Impact:* Lacks the permanence and legacy focus of MyLife, but widespread adoption could divert users from MyLife's mission-centric platform.

2. Dropbox

- *Context:* Provides cloud storage and file synchronization services, facilitating easy access to digital content.
- *Impact:* While not focused on legacy preservation, its dominance in cloud storage could limit MyLife's user base.

Social Media Platforms

MyLife has identified the following key weaknesses in this current landscape of competitors.

1. Lack of Long-Term Preservation

- Ephemeral Content: Social media platforms are designed for real-time updates and immediate engagement rather than long-term preservation of personal stories and legacies.
- No Structured Archiving: There are no dedicated tools for systematically archiving and curating personal narratives for posterity.
- No dynamic memorial portrayal: An deceased individual's content is flat and non-dynamic.

2. Privacy and Data Security Concerns

- Data Exploitation: Social media platforms often monetize user data through targeted advertising and partnerships, raising concerns about privacy and data security.
- Frequent Data Breaches: The history of data breaches on platforms like Facebook undermines user trust and poses significant risks to personal information.

3. Limited Control Over Content

- Limited User Control: Users have limited control over their content once it is posted, and platforms can use, modify, or remove content according to their terms of service.
- Algorithmic Manipulation: Content visibility is often controlled by algorithms that prioritize engagement over personal significance, leading to a loss of control over what stories are highlighted.

4. Commercial Focus on Engagement

- Superficial Interactions: Social media platforms prioritize likes, comments, and shares, often leading to superficial interactions rather than meaningful engagement with personal narratives.
- Short-Term Engagement: The focus on real-time updates and trends can result in short-term engagement, with older content quickly becoming irrelevant or forgotten.
- Profit-Driven: The primary goal of social media platforms is to generate revenue, often leading to decisions that prioritize profit over user experience and data security.
- Advertising Over User Experience: Users are subjected to constant advertising, which can detract from the personal and emotional value of the content they share.

5. No Truth-Seeking Mechanics

- Lack of Verification: Social media platforms lack robust mechanisms to verify the authenticity and truthfulness of user-generated content, which can lead to misinformation and distorted personal narratives.
- Not human-limited: no human verification.
- Echo Chambers: Algorithms often create echo chambers that reinforce existing beliefs and biases, rather than promoting a truthful and accurate representation of personal stories.

6. Fragmented and Unstructured Memories

- Disorganized Content: Users' memories and stories are scattered across various posts, photos, and videos, making it difficult to create a cohesive and comprehensive personal narrative.
- No Narrative Tools: There are no tools for organizing and curating personal stories in a structured and meaningful way.

7. Content Moderation and Censorship

- Inconsistent Policies: Content moderation policies are often inconsistent and can result in the removal of important personal stories or memories without clear justification.
- Censorship Issues: Users may face censorship for content that does not violate any policies but is flagged by algorithms or other users, leading to the loss of personal narratives.
- No place for content sensitivities or individually-triggering content.

8. Platform Dependence

- **Reliance on Platform Continuity:** Users' content is tied to the platform's continued existence and policies. If the platform changes its terms of service or shuts down, users risk losing their data.
- **Interoperability Challenges:** Transferring data from social media platforms to other services can be difficult, limiting users.

Again, this category is vast, here are a few known players:

1. Facebook

- *Context:* Allows users to share and document their lives through posts, photos, and videos.
- *Impact:* Competes with MyLife's mission to curate and preserve personal stories, especially with features like Facebook Memories.

2. Instagram

- *Context:* Enables users to share visual content and stories, focusing on real-time updates and engagement.
- *Impact:* Overlaps with MyLife's effort to capture and preserve personal narratives, though Instagram lacks a legacy preservation focus.

Market Analysis

Increasing Awareness of Digital Legacies

- **Trend:** There is a rising awareness and interest among individuals in preserving their digital legacies for future generations.
- **Impact:** People are increasingly recognizing the importance of documenting their personal stories, family histories, and cherished memories in a secure, permanent, and accessible way.
- **Relevance to MyLife:** MyLife's mission aligns perfectly with this trend, offering a platform dedicated to the enduring preservation of personal narratives and digital legacies.

Growth in AI and Digital Archiving Technologies

- **Trend:** Advancements in AI and digital archiving technologies are transforming how personal data is collected, curated, and preserved.
- **Impact:** The adoption of AI-driven solutions for organizing and accessing personal stories and media is becoming more widespread.
- **Relevance to MyLife:** MyLife leverages AI technologies to enhance the curation, organization, and retrieval of personal stories, ensuring that members' digital legacies are preserved with accuracy and depth.

Increasing Demand for Privacy and Data Control

- **Trend:** There is a growing demand for privacy and control over personal data, driven by concerns over data breaches and misuse of personal information.
- **Impact:** Individuals are seeking platforms that offer robust privacy protections and give them full control over their data.
- **Relevance to MyLife:** MyLife emphasizes privacy and data sovereignty, providing members with secure, self-hosted solutions and partnerships with privacy-focused organizations.

Increasing Collaboration between Nonprofits

- Trend: There is a growing collaboration between technology platforms and nonprofit organizations focused on human rights and digital dignity.
- Impact: These collaborations aim to document and preserve stories of human rights defenders, marginalized communities, and significant historical events.
- Relevance to MyLife: MyLife actively seeks partnerships with human rights organizations and other nonprofits to use its platform for preserving important personal and collective narratives, amplifying voices that might otherwise be lost.

Expansion of Personalized and User-Centric Digital Services

- Trend: Personalized and user-centric digital services are increasingly valued, catering to the specific needs and preferences of individuals.
- Impact: members expect digital platforms to offer tailored experiences that reflect their unique stories and legacies.
- Relevance to MyLife: MyLife's platform is designed to provide a personalized experience, allowing members to curate and organize their digital legacies in a way that truly reflects their individual lives and histories.

By understanding and aligning with these market trends, MyLife can strategically position itself to meet the growing demand for secure, personalized, and long-term digital preservation solutions, ensuring that personal stories and legacies are preserved for posterity.

Technology Analysis

While we have discussed various technological aspects in the context of collaboration and competition, a dedicated market technology analysis can still provide valuable insights. This section can highlight the broader technological landscape, emerging trends, and innovations that could impact MyLife's strategy and development.

1. Emerging Technologies in Digital Preservation

- Blockchain for Immutable Records: The use of blockchain technology to create immutable records that cannot be altered or deleted, ensuring the integrity of personal stories and digital legacies.
- AI-Powered Data Management: Advances in AI for automating the organization, tagging, and curation of digital content, making it easier for members to manage their legacies.

2. Trends in Data Privacy and Security

- Zero-Knowledge Encryption: Technologies that ensure user data is encrypted end-to-end, with only the user having access to the decryption keys.
- Privacy-First Frameworks: The development of frameworks and protocols designed to prioritize user privacy and data protection by default.

3. User-Centric Design and Accessibility

- Avatar Interpreters: The use of avatars as front-end interpreters to help present information in a way that is sensitive to trauma and user emotions. These avatars can adapt the presentation of content to suit the user's emotional state, improving comprehension and engagement while minimizing the potential for distress.

- Accessibility Enhancements: Technologies that ensure digital platforms are accessible to members with disabilities, enhancing inclusivity. This includes features such as screen readers, voice control, and customizable interfaces that cater to various needs.
- Personalization Algorithms: AI-driven personalization that tailors the user experience based on individual preferences and behaviors. These algorithms ensure that each user interacts with the platform in a way that is most meaningful and relevant to them.

4. Integration with Other Platforms and Services

- API Ecosystems: The rise of API ecosystems that allow seamless integration with other services, enabling members to import and export their data easily.
- Interoperability Standards: Development of standards that ensure data can be shared and accessed across different platforms and services without loss of fidelity.

5. Sustainability and Ethical AI

- Green Computing: The push towards more energy-efficient computing solutions to reduce the environmental impact of digital platforms.
- Ethical AI Practices: Ensuring that AI technologies are developed and deployed ethically, with a focus on transparency, accountability, and fairness.

Customer Segments

Understanding and defining our customer segments is crucial for tailoring MyLife's services to meet the specific needs of different groups. Each segment represents a unique audience with distinct characteristics, needs, and preferences. Below, we outline the key customer segments for MyLife, along with recommended channels for outreach.

1. Memory Loss and Elderly

- Demographics: Individuals with early-stage dementia, Alzheimer's, or other memory-related conditions; senior citizens, retirees, and older adults; caregivers and family members.
- Needs: Secure and accessible platform to preserve memories, aid in cognitive exercises, and provide a sense of continuity; easy-to-use features for preserving life stories and sharing with family.
- Channels for Outreach: Healthcare providers, memory care centers, support groups, Alzheimer's and dementia organizations, senior centers, retirement communities, AARP, local community organizations, targeted social media campaigns, and partnerships with memory care apps and senior-focused tech initiatives.

2. Self-Education and Self-Exploration

- Demographics: Individuals who live alone, including the elderly, single adults, students, and those undergoing (re-)training or self-education.
- Needs: A platform to document and share their life experiences, connect with others, engage in self-exploration, and ensure their stories are not lost; tools for preserving educational journeys and combating loneliness.
- Channels for Outreach: Social services, loneliness support groups, online forums, community centers, educational institutions, social media, partnerships with organizations addressing social isolation, and collaborations with e-learning platforms.

3. Tech Advocates and AI Enthusiasts

- Demographics: Early adopters of technology, tech-savvy individuals, gadget enthusiasts, and individuals interested in artificial intelligence and machine learning.
 - Needs: Advanced features, seamless integrations, and cutting-edge technology for managing and preserving digital content; innovative AI-driven features for content curation, analysis, and preservation.
 - Channels for Outreach: Tech blogs and websites, tech and AI conferences, social media platforms like Twitter, Reddit, and LinkedIn, tech influencer partnerships, academic institutions, and collaborations with AI research organizations.
4. Humanists, Ethicists, and Religious Communities
- Demographics: Individuals and organizations passionate about human rights, ethics, moral philosophy, and religious values.
 - Needs: A platform that aligns with their values of digital dignity, privacy, preserving human stories, and respecting ethical and religious principles.
 - Channels for Outreach: Human rights organizations, ethical and moral philosophy forums, religious institutions and communities, humanities academic departments, nonprofits focused on ethics and religion, social media, and conferences and events focused on human rights, ethics, and religious studies.
5. Digital Archivists (Personal and Communal)
- Demographics: Individuals and organizations focused on archiving personal or communal histories and digital content, including family historians and cultural networks.
 - Needs: Robust tools for organizing, preserving, and sharing digital archives, with a focus on long-term accessibility and security.
 - Channels for Outreach: Archival societies, historical preservation groups, libraries, museums, academic institutions, social media platforms like LinkedIn, and partnerships with digital preservation initiatives.
6. Grief Support
- Demographics: Individuals and groups coping with loss who wish to preserve memories of loved ones.
 - Needs: A compassionate platform to document and share the stories of loved ones, providing comfort and a sense of continuity.
 - Channels for Outreach: Grief counseling services, support groups, hospices, social media, and collaborations with mental health organizations.

User Personas

In the context of MyLife's product development, user personae represent the diverse range of members who interact with the platform, each with unique needs, goals, and experiences. These personae are essential in guiding the development of features and ensuring that the platform meets the real-world needs of its users. MyLife uses these personae to tailor its tools and services, providing a personalized experience for each member. By understanding and categorizing users—whether they are individuals preserving their personal history, families collaborating on shared memories, or communities curating collective experiences—MyLife ensures that its platform evolves in a way that resonates with its humanist mission, prioritizing usability, inclusivity, and emotional connection.

These personae help inform decisions about user interface design, feature prioritization, and content strategy, making sure the platform is accessible and beneficial to a wide range of users, from tech-savvy individuals to those with minimal digital experience.

Personae List

- [Anna](#), *My Children's Time Capsule*
- [John](#), *Family History Report*
- [Louis](#), *Influencing New Generations*
- [William](#), *Trouble Remembering the Past*
- [Derek](#), *What Do I Leave Behind?*
- [Eileen](#), *A Deeper Connection with My Teenage Nieces*

@todo - @Mookse I understand that you want to be through and show the potential Mylife to reach out to at least 6 customer segments but for the alpha, specificity is key, Which selected customer segments are you pursuing? How are they related to the below personas?

Weighted Segments

1. Tech Advocates and AI
2. Self-Awareness and Self-Education
3. Elderly and Stories in Jeopardy
4. Humanists and Ethicists

1. Persona: Anna

- **Age:** 35 years old
- **Role:** Software engineer, mother, wife, and daughter

1.1 Population Context

- Young students between middle and high school: Approximately 77 million in 2021
- Parents living arrangements: Around 90 million

1.2 Who They Are

Anna is a dedicated professional and a loving parent. She balances her time between her engineering job, caring for her children, supporting her spouse, and being there for her aging parents. She uses various applications daily for leisure, work, and managing household tasks. She enjoys reading and writing, and places a high value on the education and well-being of her children and family.

1.3 Motivation to Use MyLife

Anna wants to save her biography and memories for herself, her children, and future generations. She aims to transmit her wisdom, viewpoints, and advice in a way that can be preserved and accessed by her descendants. While she currently shares these insights through verbal communication, she finds it challenging to reach and impact future generations due to busy schedules, different life stages, and distractions like technology.

1.4 Challenges:

- Finding quality time for meaningful conversations amidst the demands of her job and family responsibilities.

- Connecting with her children and future generations who are often preoccupied with studies, technology, and other activities.
- Preserving her memories and wisdom in a format that is accessible and engaging for her family.

1.5 How MyLife Helps

MyLife offers an easy-to-access platform where Anna can document and share her memories, thoughts, and experiences. Her family can access this repository at any time, allowing them to learn about their heritage and understand her perspectives. This platform helps bridge the gap created by busy lives and technological distractions, fostering deeper connections and understanding within the family.

1.6 Hypothesis

If Anna uses the MyLife member platform to document her biography and memories, then she will be able to effectively preserve and share her wisdom and experiences with her children and future generations, leading to enhanced family connections and interactions even amidst busy lifestyles.

1.6 Key Components of the Hypothesis

- Independent Variable
 - The use of MyLife platform by Anna to document her biography and memories.
- Dependent Variables
 - The extent to which Anna feels she has preserved her wisdom and experiences.
 - The perceived impact on family connections and interactions as a result of using the platform.
 - Feedback from her children regarding the accessibility and engagement of the documented content.

1.6 Testing Our Hypothesis

Description	Method	Expected Outcome
Anna uses the platform to document her experiences and interact with her family, in consequence Anna will edit and create content with certain frequency to share with her love ones.	Frequency. Active User rate. Organic Growth Rate.	Expected Frequency: Edit or create 2 objects a week. Expected Active User rate: 30% of users who used My life after 3 months of his first usage. Expected Organic Growth Rate: >10% new users are acquired relying on factors like word-of-mouth referrals, social media, or organic search traffic.

Description	Method	Expected Outcome
After some period of use, Anna is happy with the results and she is willing to refer the product to her family and friends.	Net Promoter Score: % of Promoters = <i>(Number of Promoters / Total Respondents) × 100</i> % of Detractors = <i>(Number of Detractors / Total Respondents) × 100</i> Calculate NPS: <i>NPS = % of Promoters - % of Detractors</i>	Expected NPS: >0 Suggested question for Members: How willing are you to recommend Mylife to your friends or family and why?
Anna has used and shared her memories through Mylife with her family and this fact has increase family interest and conversation about her heritage and in general has promote family communication.	Qualitative outcomes: Interview Anna to assess her perspective on the effectiveness of MyLife in enhancing communication and sharing of family heritage.	Expected answer: Yes, to at least one of the first questions. Suggested questions for a user's interview/survey: 1. Did you receive any comments or feedback from your family or friends about your memories? <i>Yes/No.</i> 2.Were there any reported improvements in family discussions about heritage and memories, or increased interest from your children in learning about their family's background? <i>Yes/No.</i> 3. If yes, could you describe your experience a bit? <i>Long Text</i>

Description	Method	Expected Outcome
Anna has used Mylife and she found a lot of help using MyLife to write her memories, as well as ease in creating and editing memories and uploading files	Easy to use. Text Completion Accuracy	Expected Ease of Use >3 in questions with answers with the Scale 1 to 5 and Yes in binary questions. Suggested Questions for Ease of Use: 1. How easy was using Mylife? <i>Scale 1 to 5</i> 2. How easy was organizing file and media? <i>Scale 1 to 5</i> 3. Did you receive meaningful assistance to create content? <i>Yes/No</i> 4. Do you feel MyLife helps you to enrich your text or generate ideas? <i>Yes/No</i> 5. What difficulties do you experienced using my life? <i>Long Text</i>

1.6 Expected Outcomes

- Anna will feel more connected to her family by sharing her insights and experiences through MyLife.
- Her children will engage with the platform, fostering a greater understanding of their family's history and values.
- The documentation process will help Anna feel fulfilled in preserving her legacy, despite her busy schedule. This hypothesis can be the foundation for developing an MVP of MyLife that meets Anna's specific needs, allowing you to gather insights and iterate on the product based on user feedback.

2. Persona: Jhon

- **Age:** 16 years old
- **Role:** High school sophomore, younger sister, stable home
- **Known Inclinations**
 - avid journaler in diary
 - needs support and strength while questioning identity
 - interested in privacy and security
- **Known Obstacles and Disinclinations**
 - limited time
 - not generally interested in technology
 - underperforming student

2.1 Population Context

- Approximately 15.4 million students attended grades 9 to 12 in the United States.

2.2 Who They Are

Jhon is a reserved, disciplined but poorly-performing sophomore at a high school in the United States. Both of their parents work, leaving limited time to directly manage the household. Jhon has been struggling with issues of self-identity and how they conform to social norms. This struggle has taken up a lot of their mindshare, and they spend a great deal of private time thinking and journaling about their experiences. Their parents know that they have chosen to be called **they**, but the majority of their struggles intentionally remain private.

2.3 Motivation to Use MyLife

@todo - more detail

Jhon, having used *MyLife* scholastically to create a family report, is curious to use the **journal** functionality to explore

2.4 Challenges

2.5 How MyLife Helps

- **User-Friendly Interface:** MyLife provides an easy-to-use interface for uploading and organizing different media files, making the process straightforward for John.
- **Collaborative Tools:** The platform offers tools for collaborating with family members, allowing them to contribute, validate, and refine the stories *together*.
- **Rich First-Hand Accounting:** The truth value of the content John uncovers represents the expressed internal experience of his relatives and kin. He can be confident that these representations are completely accurate from the vantage of the storyteller.
- **Sharing Features:** MyLife allows John to share collected memories and information into formats suitable for school presentations, streamlining the final steps of his dynamic animated project.

2.6 Hypothesis

If Jhon uses *MyLife* to explore identity then they will achieve greater satisfaction with personal decisions, find themselves open to alternatives, engage in meaningful self-development with bot, experience what it is like to encounter some of her experiences in the third person, granting greater perspective to their manifestation in the world.

2.6 Key Components of the Hypothesis

- **Independent Variables**
 - The use of MyLife by John to create his family report.
- **Dependent Variables**
 - John's perceived ease of use and efficiency in completing the family report.
 - The quality of the final report as assessed by his teacher or peers.
 - John's overall engagement with the assignment and motivation to use MyLife for future projects.

2.6 Testing Our Hypothesis

Description	Method	Expected Outcome
John is using Mylife to create his family report for this reason he should enrich his report in the following weeks until finish it	- Frequency - Active User Rate - Organic Growth Rate	Frequency: Edit or create 3 objects a week. Active User rate: 10% of users who used My life after 2 weeks of his first usage. Organic Growth Rate: >10% new users are acquired relying on factors like word-of-mouth referrals, social media, or organic search traffic.
After 2 weeks of use, John is happy with the results and he is willing to refer the product to his classmates.	Net Promoter Score: % of Promoters = <i>(Number of Promoters / Total Respondents) × 100</i> % of Detractors = <i>(Number of Detractors / Total Respondents) × 100</i> Calculate NPS: <i>NPS = % of Promoters - % of Detractors</i>	Expected NPS > 0 How willing are you to recommend Mylife to your friends or classmates? <i>Long Text</i>

Description	Method	Expected Outcome
John is working in his family report he found a lot of help using MyLife to write it, creating and editing memories and uploading files to present his homework	- Easy of Use - Text Completion Accuracy	Expected Easy of Use > 3 in questions with answers with the Scale 1 to 5 and Yes in binary questions. Suggested Questions for Ease of Use 1. How easy was using Mylife? <i>Scale 1 to 5</i> 2. How easy was organizing file and media? <i>Scale 1 to 5</i> 3.How easy was to share the report family with your teacher or evaluator? <i>Long Text</i> 4. Did you receive meaningful assistance to create content? <i>Yes/No</i> 5. Do you feel MyLife helps you to enrich your text or generate ideas? <i>Yes/No</i> 6. What difficulties do you experienced using my life? <i>Long Text</i>
John effectively completed and presented his family report to his evaluator	Teacher or other performance grader	Expected Grade > 70%

2.6 Expected Outcomes

- John will find MyLife's interface more intuitive and beneficial for gathering his research than conventional office tools.
- The collaborative features will enhance his family's participation in the project, making it a more enriching experience.
- The ability to export the report will streamline his workflow, allowing him to present his findings effectively.

3. Persona: Louis

- **Age:** 67 years old
- **Role:** Grandparent, widower, and father.
- **Known Inclinations**
 - highly motivated to share narratives and history
 - interested in connection
 - interested in privacy and consent
 - few time constraints
- **Known Obstacles**
 - not tech-savvy

- limited connectivity
- device limitations

3.1 Population Context

- Approximately 55.8 million elderly people in USA.

3.2 Who They Are

Louis, recent widower, is an elderly man who worked most of his life in the countryside. This physical work made him strong in character. However, it also wore out his joints, so he is no longer able to work as he used to and depends economically on his children. He observes that the younger generations of his family are more interested in technology than in the land and nature. He worries that his children and grandchildren are jeopardizing their mental health for their jobs and their physical health due to their sedentary lifestyles. As well, this accelerated way of life abstracts them from the socially important matters.

3.3 Motivation to Use MyLife

He wants to transmit his experience and knowledge to his loved ones He wants to start writing about his own life, memories, and lessons learned with the hope that it contributes to and enriches his family lives.

3.4 Challenges

- Louis found the communication with his family is hard because the several relatives occupations
- Louis faced a challenge to communicate his ideas, sometime he could sound rude because his strong character and the generational gap.

3.5 How MyLife Helps

- **Platform to write and save memories** MyLife provides a platform to write and save his memories to be shared with family and friends offering AI tools to have an accertive writing and message
- **Facilitating Asynchronous Communication** My life allows asynchronous communication allowing that love ones can review the Louis memories when they have a relax time
- **Shared Features:** My life allows family members or friends read the Louis memories in a friendly interface

3.6 Hypothesis

If Louis uses MyLife to document and share his life experiences, wisdom, and values, then his family will have more opportunities to engage with and appreciate his legacy at their own pace. This platform will help Louis communicate more effectively across generations, bridging the gap between his traditional experiences and the technology-driven lives of his loved ones.

3.6 Key Components of the Hypothesis

Independent Variable: Use of MyLife AI Platform: The extent to which Louis engages with the platform's features, such as writing, saving memories, using AI tools for communication, and facilitating asynchronous sharing. **Dependent Variables:** Perceived Ease of Use: Louis's ease in writing, saving memories, and uploading

files on the platform. Family Engagement: The frequency and depth of family interactions with Louis’s shared memories. Communication Effectiveness: The clarity and empathy with which Louis communicates his ideas and experiences across generational lines. Appreciation of Heritage: The degree to which Louis’s family values and incorporates his wisdom, traditions, and experiences into their lives.

3.6 Testing Our Hypothesis

Description	Method	Expected Outcome
Louis finds the MyLife AI platform easy to use, then he will regularly document his memories and upload files.	- Frequency - Active User Rate - Organic Growth Rate	Frequency: Edit or create 1 object a week. Active User rate: 10% of users who used My life after 2 months of his first usage. Organic Growth Rate: > 10% new users are acquired relying on factors like word-of-mouth referrals, social media, or organic search traffic.
After 2 weeks of use, Louis is happy with the results and he is willing to refer the product to his family and friends.	Net Promoter Score: % of Promoters = <i>(Number of Promoters / Total Respondents) × 100</i> % of Detractors = <i>(Number of Detractors / Total Respondents) × 100</i> Calculate NPS: <i>NPS = % of Promoters - % of Detractors</i>	Expected NPS: > 0 How willing are you to recommend Mylife to your friends? <i>Long Text</i>
Louis is working is documenting his memories he found a lot of help using MyLife to write it.	- Ease of Use - Text Completion Accuracy	Expected Ease of Use > 3 in questions with answers with the Scale 1 to 5 and Yes in binary questions. Suggested Questions for Ease of Use 1. How easy was using Mylife? <i>Scale 1 to 5</i> 2. How easy was organizing file and media? <i>Scale 1 to 5</i> 3. Did you receive meaningful assistant to create content? <i>Yes/No</i> 5. Do you feel MyLife helps you to enrich your text or generate ideas? <i>Yes/No</i> 6. What difficulties do you experienced using my life? <i>Long Text</i>

3.6 Expected Outcomes

- Louis' family members will gain valuable insights into their heritage, leading to richer family connections and a better understanding of the importance of balancing modern life with nature and meaningful traditions
- Louis feels comfortable and he is enthusiastic sharing his legacy in a way that resonates with his family, despite their busy lives and the generational differences
- Louis stories fostering deeper connections with his loved ones.

4. Persona: William

@todo - indicate sense of memory loss, no diagnoses

- **Age:** 65 years old
- **Role:** Retiree, father, husband, and grandparent suffering memory loss
- **Known Inclinations**
 - highly motivated to share narratives and history
 - interested in precision and persistence
 - interested in privacy and consent
- **Known Obstacles**
 - not tech-savvy
 - suspicious of artificial intelligence (?)

4.1 Population Context

- Approximately 6.9 million Americans suffer from Alzheimer's or other forms of dementia (according to the Alzheimer's Association).

4.2 Who They Are

William is a retired professional who now enjoys spending time with his family, including his children and grandchildren. He has recently been diagnosed with early-stage Alzheimer's disease. Fully aware of the disease's progression and its impact on his life, William is proactive in finding ways to manage his condition and maintain his sense of self.

4.3 Motivation to Use MyLife

William wants to create a detailed biography and document his memories while he is still in the early stages of Alzheimer's. His goal is to preserve his identity and personal history from his perspective, ensuring that he can recall significant moments and experiences even as the disease progresses. Additionally, he aims to provide a legacy for his family, allowing them to understand his life story and maintain a connection with him despite the changes that the disease will bring.

4.4 Challenges

- Gradual loss of memory and changes in identity due to Alzheimer's disease.
- Difficulty in maintaining consistent relationships and perceptions as the disease progresses.

- The need to preserve his personal history and experiences in a way that remains true to his own perspective.

4.5 How MyLife Helps

MyLife provides William with a user-friendly platform to document his memories and life experiences. The platform allows him to create a detailed biography, which can be accessed and cherished by his family. This helps William maintain his sense of identity and ensures that his personal history is preserved accurately. The platform also offers tools to help him organize his thoughts and memories, making it easier for him to document his life story despite the challenges posed by Alzheimer's disease.

4.6 Hypothesis

If William uses the MyLife platform to document his biography and memories, then he will be able to preserve his identity and personal history, providing a valuable legacy for his family. This will help his family maintain a connection with him and understand his life story, even as Alzheimer's disease progresses and impacts his memory and identity. It will help William himself maintain some level of continuity of self through the progression of the disease.

4.6 Key Components of the Hypothesis

- Independent Variable: The use of MyLife by William to document his biography and memories.
- Dependent Variables:
 - William’s perceived ease of use and ability to document his memories.
 - The emotional and cognitive benefits experienced by William through the use of MyLife.
 - The family’s engagement with and perception of William's documented legacy.

4.6 Testing Our Hypothesis

Description	Method	Expected Outcome
William logs in to the MyLife platform on a near-daily basis to review his recent memories and contributions.	- User Engagement	Track how often William logs into MyLife and how he utilizes its features to document his memories and experiences. Can we track user interaction in terms of frequency, components used, and functionality utilized? Measures of success might include: Frequency of logins (e.g., weekly), Components used (e.g., biography, memories), and Functionality (e.g., adding photos, voice recordings).
tbd	Feedback Collection: Gather feedback from William regarding his experience with MyLife, focusing on ease of use and benefits.	Are we able to interview William and his family? Collecting feedback is crucial. Questions might include: How easy is MyLife to use? Do you feel MyLife helps you to create meaningful content? How useful are the organizational tools? How emotionally beneficial is it to document your memories?

Description	Method	Expected Outcome
tbd	Outcome Metrics: Evaluate the completeness and richness of the biography and memories documented by William. Assess family feedback on the legacy.	Interview member (William) as well as their family to get perspectives on the documented legacy. Metrics might include: Content depth, organization, emotional impact on the family, and whether they feel a stronger connection to William’s life story. Questions might include: How valuable do you find the documented memories?

4.6 Expected Outcomes

- William will find MyLife's interface intuitive and beneficial for documenting his biography and memories.
- The documentation process will provide emotional and cognitive benefits, helping William maintain a sense of identity and continuity.
- William's family will value the documented legacy, feeling a stronger connection to his life story and experiences, which will help them maintain a bond with him as the disease progresses.

5. Persona: Derek

- **Age:** 54 years old
- **Role**
 - Corporate librarian (employed)
 - Husband
 - No children
 - Unpublished poet
- **Known Inclinations**
 - motivated to share narratives and artwork
 - wants versatility and dynamism in a legacy solution
 - suspicious of corporate interests
 - creative ability
 - tech enthusiast
 - interested in philosophy and humanism
- **Known Obstacles and Disinclinations**
 - limited time
 - widely diverse interests

5.1 Population Context

- TBD

5.2 Who They Are

Derek is a working professional whose wife also works. They do not have any children and enjoy life in the suburbs where they often see members of one another's families. Derek enjoys his work and has overseen very positive technology implementations at his library. He hopes to leave something of his legacy of memories, thoughts, ideas, and works of poetry behind for his extended family, but as importantly for anyone who might be interested or helped by his ideas and inspirations. Derek wishes he were more proactive in storing and capturing his memories, worried that the impacts he'll make in his small milieu will not endure him. Morally, he does not wish to leave his legacy to corporate interests that will outlast his ability to pay.

5.3 Motivation to Use MyLife

Derek wants to explore possibilities for what he can leave behind for humanity beyond a cemetery gravestone. Much of his work, and most of his modern adult art is either scanned or digital by nature. His goal is to preserve his identity and personal history from his perspective, so that what he cherished could resonate with others who might find emotional or intellectual value from his works. He realizes that he will leave behind digital ghosts and traces of himself whether *he* intends to or not, so would rather store for posterity first-hand accounting of his experiences.

5.4 Challenges

- Few universal and no sophisticated platforms to store one's digital remains for posterity
- The desire to preserve his personal history and experiences in a way that remains true to his own perspective
- No desirable human-to-human connectivity platform in social media milieu
- Strict values about how his data should be used and cataloged
- Important to express *both* his professional and artistic sides

5.5 How MyLife Helps

MyLife provides Derek with a user-friendly platform to document his memories, personal digital artifacts, and experiences. The platform allows him to create a detailed biography, as well as generate collections of his works for sharing. MyLife's nonprofit membership model assures Derek that his data will be preserved for posterity and that each member is a core stakeholder in the platform, even after death. Knowing his experiences can be shared across time and space to help others in need gives Derek a sense of appreciation and wholeness for being able to give back; his lessons learned can give comfort to others, and his art can be appreciated for eternity.

5.6 Hypothesis

If Derek uses the MyLife platform to document his biography, creative works and memories, he will experience greater peace of mind that he can create a viable, valuable legacy for others to appreciate and gain solace or inspiration from. As Derek's personas are represented through his avatars, and his artwork and memories are performed according to *his* choices and settings, he has faith that an accurate depiction of himself and his aims will be captured for posterity. MyLife's nonprofit membership model assures Derek that his data will be preserved for posterity.

5.6 Key Components of the Hypothesis

- Independent Variable: The use of MyLife by Derek to document his biography and memories.
- Dependent Variables:
 - Derek's perceived ease of use and ability to document his artwork and memories.
 - The emotional benefits experienced by Derek through the use of MyLife.
 - Other Member awareness and interaction with Derek's documented legacy.

5.6 Testing Our Hypothesis

Description	Method	Expected Outcome
Derek logs in to the MyLife platform on a near-daily basis to add and update his recent memories, art and other contributions.	- User Engagement - Avatar Fidelity - Availability	Frequency of Logins > 3x / week Functionality Engaged > 3 per type Review Derek's artifact collection item numbers by type Level of Interest > 3 What is your overall satisfaction with the MyLife Platform? Scale 1 to 5
Derek is happy with his MyLife membership and refers the platform to family and friends.	Net Promoter Score: % of Promoters = $(\text{Number of Promoters} / \text{Total Respondents}) \times 100$ % of Detractors = $(\text{Number of Detractors} / \text{Total Respondents}) \times 100$ Calculate NPS: $NPS = \% \text{ of Promoters} - \% \text{ of Detractors}$	Expected NPS: > 0 Suggested question for Members: How willing are you to recommend Mylife to your friends or family and why?
Derek has shared his memories and artwork through Mylife with his family and friends, and allowed other members with similar iterests to view some of his poetry.	Qualitative outcomes: Interview Derek to assess his perspective on the effectiveness of MyLife in enhancing communication with his network and sharing of art and ideas.	Expected answer: Yes to at least one of the first questions. Suggested questions for a user's interview/survey: 1. Did you receive any comments or feedback from your family or friends about your memories? <i>Yes/No.</i> 2. Were there any reported improvements in family discussions about heritage and memories, or increased interest from your children in learning about their family's background? <i>Yes/No.</i> 3. If yes, could you describe your experience a bit? <i>Long Text</i>

Description	Method	Expected Outcome
Derek has used Mylife and has found a lot of value in engaging with the various team bots to record and capture his cherished ideas and media.	- Easy to use - Text Completion Accuracy - Platform Functionality - Avatar Fidelity	Expected Ease of Use > 3 and Yes Suggested Questions for Ease of Use: 1. How easy was using Mylife? <i>Scale 1 to 5</i> 2. How easy was organizing file and media? <i>Scale 1 to 5</i> 3. Did you receive meaningful assistance to create content? <i>Yes/No</i> 4. Do you feel MyLife helps you to enrich your text or generate ideas? <i>Yes/No</i> 5. What difficulties do you experienced using my life? <i>Long Text</i>

5.6 Expected Outcomes

- Derek will find MyLife's interface intuitive and beneficial for documenting his biography and memories.
- The documentation process will provide emotional and cognitive benefits, helping Derek maintain a sense of identity.
- Derek feels comforted and empowered by the notion that his legacy will be available to posterity, extending his ability to virtually connect with others across time, language and space.

6. Persona: Eileen

The Problem

Use Cases

Arranged by audience segment; @sheikita I'm going to move some of these around now that I have Derek as a persona I'll use him for #2 for now and I've updated Louis' persona to yield fruit under #3. Make sense? @Mookse: It does. For now, I will suggest that we focus on the Eldery (60+) customer segment for 1 and remove culturally underprivileged.

1. Stories in Jeopardy: The elderly, culturally underprivileged, etc. This covers William's persona and to an extent Louis.
- Arranging My Digital Legacy: **Personal Preservation**

▪ Louis is able to write his biography in his own terms while maintaining his sense of identity

◦ A Grandparent's Legacy for Future Generations: **Wisdom Preservation**

▪ Preserves personal histories for future generations

◦ Memory Stimulation: **Memory Preservation**

▪ Aids in recalling and sharing past experiences

▪ Real-time tracking of mental exercises that can help protect against age-related losses

2. Personal Growth --> @Mookse: What do you think if this customer segment is renamed to "Personal Growth Enthusiasts" (referring to people that engage regularly in self-reflection and are interested in tools that help them document their thoughts and experiences in their own terms. Individuals that are motivated to share them to fulfill their interest of maintaining meaningful connections with fam/friends. Targeting 25-55 individuals with moderate to high level of education). The corresponding customer segment will need to be updated)
 - Creative Sharing: Facilitates sharing memories with family members → Life lessons and wisdom
 - Personal Storytelling: Encourages sharing experiences with others by making them more relatable and using a more engaging tone → Stories and histories passed down through generations
 - Daily Journaling: Promotes self-expression → Personal growth and self-exploration
3. Struggling with Grief and Connection
 - Louis
4. Tech-Savvy Parents
 - Family Events: Documents vacations, birthdays, and special occasions → Capturing Milestones and Achievements
 - Digital Self Creation → Planting the seeds on how to be remembered → Preserving a Lifetime of Memories
 - Children/Parent/Family Hobbies: Documents the hobbies/activities that family members pursue → Documentation of hobbies and passions
5. Resourceful Gen-Z Teenagers -@Mookse- Lets add the specific details of this customer segment in the corresponding section (demographics, needs, channels for outreach); agreed - I'll intend to review John (the student) in this context.
 - *Identity Wardrobe*: Youth can explore (similar to #2 above) personal identity in a private and safe space
 - *Here's Me!*: Member avatar personae that can be shared amongst friends and family
 - *School Assignment*: School Projects, Guides in organizing and completing assignments → My Research Projects

Identifying Pain Points

When analyzing the pain points associated with MyLife's use cases, it's important to consider a broad range of issues that can affect members. These pain points can be categorized into several large categories, each addressing different aspects of the member experience. Here are the primary categories of pain points:

1. Emotional Pain Points

1. Loneliness, Disconnect and Isolation

1. Feeling Disconnected

- Many individuals feel isolated and disconnected from their past and the people around them. This can lead to a sense of loneliness and a lack of community.
- MyLife provides a platform where members can preserve and share their memories, creating a sense of connection with their past and others. The platform allows members to document their experiences and share them with friends, family, and a broader community, fostering a sense of belonging and continuity.

2. Feeling Irrelevant

- People often feel their lives and experiences are insignificant or overlooked.

- MyLife helps members feel valued by preserving their stories and contributions. This digital self ensures that their experiences are acknowledged and remembered, reinforcing their significance and relevance. MyLife helps members feel valued by preserving their stories and contributions. This digital self ensures that their experiences are acknowledged and remembered, reinforcing their significance and relevance.

2. Death Anxiety

1. Legacy Preservation Anxiety

- Fear that one's life stories and legacy will be forgotten after death.
- MyLife offers a durable, enduring platform to ensure members' stories and legacies are preserved and accessible for future generations, alleviating anxiety about being forgotten.

2. Unacknowledged Impact

- Anxiety about not leaving a lasting impact or tangible record of one's life.
- Through MyLife, members can document their achievements, memories, and personal growth, creating a lasting testament to their time on Earth.

3. Grief and Loss

1. Coping with the Death of Loved Ones

- Struggling with grief and the desire to memorialize deceased loved ones.
- MyLife provides a space to create digital memorials, allowing members to celebrate and remember loved ones' lives. These memorials can be shared and revisited, offering comfort and connection.

4. Stress and Overwhelm

1. Overwhelmed by Personal Content

- Difficulty in organizing and preserving large amounts of personal content.
- MyLife offers tools for easy organization and curation of personal media, simplifying the process of preserving and sharing memories.

2. Difficulty Setting Aside Time for Reflection

- Struggling to find time and space for reflecting on life experiences.
- MyLife's user-friendly platform encourages regular documentation and reflection, integrating these activities into daily routines and missions.

5. Identity Crisis

1. Struggling with Self-Identity

- Difficulty in exploring and expressing different aspects of one's persona.
- MyLife allows members to document various facets of their identity, providing a comprehensive and nuanced representation of who they are.

2. Inability to Express Self as Intended

- Challenges in articulating personal stories and experiences accurately.
- MyLife offers interactive content prompts, templates, and AI assistance to help members articulate their experiences clearly and authentically.

6. Fear of Judgment

1. Anxiety About Perception by Others

- Worry about how personal stories and memories will be perceived by others.
- MyLife ensures content is aligned with the member's intent and reception, fostering a supportive environment free from harsh judgments.

7. Emotional Burden

1. Emotional Toll of Revisiting Past Experiences

- The stress of confronting and documenting traumatic or difficult life experiences.
- MyLife provides a controlled and supportive environment for revisiting past experiences, allowing members to manage how and when they engage with these memories.

2. Lack of Control Over Memories

- Feeling overwhelmed by the lack of control over how memories are documented and shared.
- MyLife gives members full control over their digital archives, ensuring they can manage their memories as they see fit.

3. Struggling to Accept and Document Difficult Aspects of Life

- Challenges in reconciling and documenting unpleasant or traumatic experiences.
- MyLife offers tools and support for members to document all aspects of their life, promoting healing and acceptance.

8. Motivation

1. Self-Managed Introspection

- Difficulty in finding motivation to document and preserve memories.
- MyLife's mission-oriented and intuitive platform encourages regular introspection and documentation, making these activities engaging and rewarding.

2. Directionless

- It is often unclear what to do next after sharing a story.
- MyLife emphasizes authenticity and accuracy in memory preservation, providing a trusted platform for documenting and sharing true experiences.

2. Technical Pain Points

1. Data Collection

1. Fragmented Data Sources

- Personal data is scattered across various platforms (social media, emails, devices) making it difficult to gather all relevant information.
- MyLife offers integrations with popular content engines and platforms, centralizing data collection and simplifying the process of gathering all personal content in one place.

2. Lack of Integration

- Incompatible formats and lack of integration between different data sources and platforms.
- MyLife supports various data formats and provides APIs for seamless integration, ensuring compatibility across different systems.

3. Manual Data Entry

- Time-consuming and tedious process of manually entering and organizing personal data.
- MyLife utilizes AI-driven tools for automatic data entry and organization, reducing the burden of manual input. Memories are built on intelligent summaries of the content, so that there is no need for grammatical correctness or spelling when entering content.

2. Data Curation

1. Inconsistent Metadata

- Lack of standardized metadata makes it difficult to organize and search personal data.
- MyLife employs intelligent dynamic metadata schemas and offers automated and member-driven tagging to ensure consistent data retrieval and portrayal.

2. Limited Editing Tools

- Inadequate tools for editing and annotating personal content.
- MyLife provides innate editing tools and interactive content prompts, enabling members to easily edit and annotate their content. Members can relive their own memories and content, editing and altering the core information with member engagement.

3. Version Control

- Challenges in managing different versions of the same document or media file.
- MyLife operates on an evolutionary model with memory, and every portrayed experience is slightly different to keep data fresh and vibrant while maintaining its historical incorporation.

3. Data Preservation

1. Data Loss Risk

- Risk of data loss due to hardware failure, accidental deletion, or software issues.
- MyLife ensures data redundancy through cloud storage and automatic backups, minimizing the risk of data loss. The platform is distributable, so one can even host and own their own instance.

2. Storage Limitations

- Insufficient storage capacity and high costs associated with large-scale data storage.
- MyLife offers scalable cloud storage solutions buoyed by grants and donations as well as direct platform earnings from anonymized consensual first-hand content data packaged for research sale.

3. Long-Term Accessibility

- Ensuring data remains accessible and readable over long periods, given the rapid pace of technological change.
- MyLife adheres to open standards and regularly updates its platform to ensure long-term data accessibility and compatibility. MyLife has a dissolution plan that can be enacted through voting or individual member migration.

4. Privacy and Security

1. Data Privacy Concerns

- Ensuring personal data is kept private and secure from unauthorized access.
- MyLife employs robust encryption, secure authentication, and privacy controls to protect members' data from unauthorized access. Avatar relationships formed will learn to detect suspicious activity, and MyLife relies on a number of ecosystem services that would help validate a member's authentic humanity.

2. Identity Theft Risk

- Vulnerability to identity theft and misuse of personal information.
- MyLife employs periodic intelligent anonymous audits of content partitions to detect unusual or inauthentic behavior. Systems and avatars report hijacking attempts.

3. Secure Sharing

- Difficulty in securely sharing personal data with trusted individuals without risking exposure to others.

- MyLife offers secure sharing options where permissions are natural language intelligent consent engines that interact with a member-to-member relationship intelligence that governs further permissions and connections to ensure compliance with negotiations and consent.

5. Usability and User Experience

1. Complex Interfaces

- Overly complex and non-intuitive user interfaces that make it difficult for individuals to use the platform effectively.
- MyLife features a user-friendly mobile and audio interface with intuitive navigation and helpful tutorials, making it accessible to members of all skill levels. Almost all actions can be undertaken by voice alone, and Q, the corporate intelligence, is always available for assistance.

2. Lack of Personalization

- Insufficient customization options to cater to individual preferences and needs.
- MyLife allows extensive customization of member profiles and content organization, providing a personalized experience. MyLife itself is a headless API, so could accommodate further Avatar-based frontend experience customization both by coding and dynamically intelligently.

3. Learning Curve

- Steep learning curve for users unfamiliar with digital tools and technology.
- MyLife offers comprehensive onboarding and support resources, including video tutorials and live intelligent assistance, to help members get started. Natural language prompt-mechanics and help interfaces are always available.

4. Accessibility

- Issues accessing the platform due to physical or cognitive disabilities.
- MyLife is designed with accessibility in mind, providing features such as screen reader compatibility, keyboard navigation, and customizable text sizes to accommodate members with disabilities.

6. Automation and AI

1. Inaccurate AI Assistance

- AI tools that provide inaccurate or irrelevant suggestions for organizing and curating personal data.
- MyLife utilizes advanced AI algorithms that are continually refined to improve accuracy and relevance, offering personalized and context-aware suggestions. Bot teams work together to minimize mistakes, and our avatar evolution agent manages feedback and assessment.

2. Limited Automation

- Lack of automation for routine tasks such as tagging, organizing, and backing up data.
- MyLife automates data saving and interactions, including dynamic categorization through intelligent metadata tagging to save members time, effort and accuracy.

3. Bias in AI

- AI algorithms that may introduce bias, affecting the accuracy and fairness of data curation.
- MyLife actively works to mitigate AI bias through regular audits and the use of diverse training datasets, ensuring fair and accurate data curation. MyLife aims to

with sensitivity and cultural bias-correction intelligences.

7. Interoperability

1. Compatibility Issues

- Difficulty in ensuring compatibility between different systems, software, and devices.
- MyLife supports a wide range of formats and standards, ensuring compatibility with various systems and devices. Additionally, it is a wholistic aggregator platform where one can recruit external or custom agents to MyLife teams.

2. Data Migration

- Challenges in migrating data from old platforms to new ones without data loss or corruption.
- MyLife provides robust data migration tools and support to facilitate seamless transitions between platforms. MyLife is an aggregator platform that can connect with external intelligences.

3. API Limitations

- Limited or no API access for integrating third-party tools and services.
- MyLife offers comprehensive API access, allowing seamless integration with third-party tools and services for enhanced functionality. Through a member's avatar, they can extend MyLife API functionality to external platforms or avatars.

8. Cost and Resource Allocation

1. High Costs

- High costs associated with storage, data backup, and professional curation services.
- MyLife's member platform is free, supported by donations, grants, funds, and corporate api access.

2. Resource Intensity

- Significant time and resources required for ongoing data management and preservation.
- MyLife automates all aspects of data management and preservation, reducing the time and resources required from members.

3. Maintenance Overhead

- Continuous need for technical maintenance and updates to ensure data integrity and accessibility.
- MyLife handles all technical maintenance and updates, ensuring members' data remains secure and accessible without additional effort. Agent and bot instructions are versioned and updated automatically.

3. Practical Pain Points

1. Time Constraints

- Lack of time to document and organize personal stories and memories.
- MyLife offers automated tools for data entry, tagging, and organization, reducing the time required for manual documentation and allowing members to efficiently preserve their stories even with limited time.

2. Cost

- Financial barriers to accessing premium features or services for preserving memories.
- MyLife provides free basic features, ensuring that members can access essential services without financial strain. Additionally, there are options for in-memorial donations and sponsorships to support those in need.

3. Resource Limitations

- Limited access to the necessary tools, devices, or internet connectivity.
- MyLife offers a lightweight web interface and mobile app that can function on various devices and with limited internet connectivity. Offline data entry options are also available, allowing members to upload their content when connectivity is restored. Multiple mechanics available for sponsored hosting or self-hosting.

4. Lack of Knowledge

1. Getting Started

- Not knowing where to start or how to effectively document and preserve personal histories.
- MyLife provides comprehensive guides, video tutorials, and interactive prompts to help members get started and effectively document their personal histories. Additionally, AI-driven suggestions and templates make the process intuitive and accessible.

2. Data Collection

- Difficulty in aggregating personal data from various sources like social media, emails, and personal devices.
- MyLife offers simple mechanics to incorporate content and media, automatically aggregating personal data into one centralized location, simplifying the collection process.

3. Organizing and Tagging Content

- Individuals struggle to organize and tag their content effectively, making it difficult to retrieve specific memories or information.
- MyLife provides AI-driven tagging and organizational tools that automatically categorize and tag content based on metadata and member inputs, making retrieval easy and efficient.

5. Digital Media Limitations

1. Authenticity

- Concerns that homegrown digital memories created without personal input will lack authenticity or were faked.
- MyLife emphasizes member-generated content, allowing members to verify and personalize their digital memories, ensuring authenticity and personal relevance.

2. Media Quality

- Media quality or relevance degrades over time.
- MyLife intends to evolve and upgrade its content consumption and portrayal mechanics, for all members, deceased or living.

3. Obsolescence

- Digital media formats can become obsolete over time, making it difficult to access and view old files.
- MyLife dynamically upgrades, converts, and translates media to newer formats and technology substrates, ensuring long-term accessibility and compatibility with evolving technologies.

4. Socio-Cultural Pain Points

1. Sociological Pain Points

1. Superficial Connections

- Social media often fosters shallow interactions rather than meaningful connections, leading to feelings of isolation and loneliness.

- MyLife promotes deeper engagement by encouraging members to share meaningful stories and memories, fostering genuine connections with friends, family and compatriotic thinkers through authentic content.

2. Echo Chambers and Misinformation

- Social media platforms can create echo chambers and spread misinformation, affecting users' perception of reality and trust in shared information.
- MyLife prioritizes accuracy and authenticity in content, providing tools for members to verify and fact-check their memories and stories, fostering a more trustworthy and reliable digital space. Timelines and interactions are cooperatively and intelligently vetted by relationship manager agents.

3. Cyberbullying and Online Harassment

- The anonymity and reach of social media can lead to cyberbullying and online harassment, causing emotional distress and reluctance to share personal stories. Exposure to violent language and toxic behavior on social media platforms.
- MyLife ensures a safe and supportive environment with robust consent and privacy controls, allowing members to share their stories without fear of harassment or negative feedback.

4. Digital Overload and Burnout

- Constant exposure to digital content and social media can lead to information overload and burnout.
- MyLife offers a focused and intentional platform for memory preservation, helping usmembersers to engage with their digital content in a more mindful and meaningful way. The platform aims to be a digital sanctuary where personal work can be accomplished and takes primacy.

5. Lack of Empathy

- No common value attached to narrative contributions to the whole of society, leading to a lack of empathy.
- MyLife fosters a community of empathy by valuing and highlighting personal narratives, encouraging members to share their stories and learn from others' experiences.

6. No Global Mechanic for Digital Self-Preservation

- Lack of an ethical framework for preserving culture and society.
- MyLife is built on ethical principles of digital dignity, equality, and security, providing a trusted platform for preserving cultural and societal narratives.

7. Existential Fears

- Fear of an uncertain future and the desire for a meaningful legacy.
- MyLife offers tools to document and imagine an "active" posterity, helping members visualize and shape their legacy for future generations.

2. Cultural and Social Barriers

1. Fear of Judgment

- Concerns about how personal stories and memories will be perceived by others can discourage sharing and documentation.
- MyLife allows members to control the audience for their content, ensuring that stories are shared only with trusted individuals, reducing the fear of judgment.

2. Lack of Cultural Representation

- Mainstream social media platforms may not adequately represent diverse cultural backgrounds and histories.
- MyLife encourages members to document and share their unique cultural heritage, providing a platform that values and preserves diverse cultural narratives.

3. Intergenerational Gaps

- Differences in technology use and preferences between generations can create barriers to sharing and preserving family histories.
- MyLife offers user-friendly tools that cater to all ages, enabling seamless sharing of memories across generations and bridging the technological gap. Narratives and portrayals are updated to take advantage of the most recent technologies, ensuring that historical stories are rendered with current fidelity.

4. Stigma Around Mental Health and Vulnerability

- Cultural stigma around mental health and sharing vulnerable experiences can discourage individuals from documenting important aspects of their lives.
- MyLife promotes a supportive community where members can safely share their experiences, including those related to mental health, fostering understanding and reducing stigma. All narratives are protected by natural language consent.

5. Economic Barriers

- Limited financial resources can prevent individuals from accessing platforms and tools for memory preservation.
- MyLife's member services are free.

6. Cultural Differences

- Cultural differences impact the way personal histories are documented and shared, including what is expected to be stored and what ought not to be.
- MyLife respects and accommodates diverse cultural practices, providing customizable options for members to document and share their histories according to their cultural norms by shaping how their story is shared and told.

7. Lack of Support

- Insufficient support from family or community in documenting and preserving stories.
- MyLife offers a supportive community and resources to help individuals document their stories, even if they lack support from immediate family or community.

8. Language Barriers

- Difficulty understanding and learning from other cultures due to language differences. Challenges in effectively communicating and sharing stories with others.
- MyLife supports multilingual content and translation, enabling members to share and learn from stories across different languages and cultures.

3. Ethical and Philosophical

1. Ethical Concerns

- Concerns about the ethical use and preservation of personal data and stories.
- MyLife adheres to strict ethical guidelines and principles, ensuring that all data is used and preserved responsibly and with the consent of the member.

2. Questions of Legacy

- Questions about the purpose and meaning of preserving personal memories for future generations.

- MyLife provides a platform for members to reflect on and articulate their reasons for preserving their stories, offering tools for meaningful introspection and legacy building.

3. Digital Immortality

- Concerns about the concept of digital immortality and its impact on humanity.
- MyLife fosters a balanced approach to digital legacy, emphasizing the importance of meaningful preservation over the mere accumulation of data. MyLife believes that our lessons and narratives survived in digital form can serve to help others across both time and space.

4. Consent and Autonomy

- Ensuring that individuals have control and autonomy over their digital memories and legacies.
- MyLife prioritizes member consent and control, allowing individuals to decide what, how, and with whom their memories are shared.

Addressing Pain Points

By identifying these categories of pain points, MyLife can develop targeted strategies to address the specific needs and challenges of its members. This involves designing features and services that alleviate these pain points, providing a seamless and supportive experience for memory preservation and digital legacy management. For each use case, MyLife can offer tailored solutions that mitigate the identified pain points, ensuring that members feel supported and empowered in their journey to document and share their life stories.

Problem Statement

MyLife aims to simplify and enhance the process of collecting, curating, sharing, and preserving personal memories and identity for posterity across diverse cultures by providing interactive, AI-powered guidance and tools.

Hypotheses and Mission Statement

The Solution

MyLife Member Services Platform

Leveraging Artificial Intelligence

AI is essential for creating personalized learning experiences, providing instant feedback, and offering round-the-clock tutoring, all of which are impossible to achieve manually at scale.

Feature Prioritization

MVP

Roadmap

- FY2024
 - Q3:
 - Initial volunteer outreach (PM)

- Define MVP
- Develop and test Alpha Pilot internally
- Define PRD
- Conduct Alpha Pilot Program
- Q4:
 - Conduct Open Alpha
 - Interim Executive Director
 - Fundraising
 - Staffing

Technical Architecture

- Webapp Hosting: MS Azure (paid)
- Frontend: HTML5, CSS, Animations, javascript (open)
- API Backend: Node.js with Koa (open)
- AI Models: OpenAI GPT Assistant Technology with custom functions and actions (paid)
- Embedding Service: OpenAI Vectorstore and File Storage (paid)
- Database: Cosmos NoSQL for storing user data and interactions (paid)
- Assets: Flat asset file storage for images and video (tbd)

Assumptions and Constraints

- Users have access to the internet and compatible devices.
- AI algorithms will require regular updates and training with new data.
- Codebase evolves through frequent refactor
- Rely on as much intelligent interoperation as functionally feasible

Risks

- Data Privacy: Ensuring user data is securely stored and managed

Requirements

Functional Requirements

- Secure Login
- Digital Self Avatar
- Memory Team
 - Capture and Collect
 - Improve, Bolster and Enhance
 - Relive Memories
 - Share Memories
 - Build Collective Memories
- Experience Framework
 - Mechanic for dynamically reliving or sharing memories
- Help Framework
- Account Management

Non-functional Requirements

- High availability and scalability.
- Secure user authentication and data encryption.
- Responsive and user-friendly interface.

Data Requirements

- User performance data for personalized study plans.
- Real-time interaction data for feedback and tutoring sessions.

Challenges

- Ensuring the AI models are accurate and unbiased.
- Acquiring enough quality data for training the models.
- Maintaining user engagement over time.

Positioning

Use Case	Pain Point	Possible Solutions	Impact of Solution
Personalized Study	Lack of tailored study plans	AI-generated study schedules	Improved Study
Use Case 2			
Use Case 3			

Measuring Success

Metrics

- Member Engagement: Daily active members and session duration.
- Member Contributions: Daily document creation (+avg by member)
- Retention: Monthly Active Member rate

AI-specific Metrics

- Model Accuracy: Precision and recall of AI recommendations
- Coherence: ability to cogently portray and assess information and member experience
- Facility and utility of greetings, getting started (make button!)
- Response Time: Average time to provide feedback
- Diversity and creativity metrics for experiences
- Increasing pace of sophistication in executive function and portrayal mechanics

North Star Metric

- User Success Rate: Percentage of members achieving their study goals.

Launching

Stakeholders & Communication

- Regular updates to investors and educational partners.

- Clear communication with members through newsletters and in-app notifications.

Roll-out Strategy

- Beta Launch: Initial release to a selected group of members for feedback.
- Public Launch: Full launch with marketing campaigns targeting students and educators.
