

Grant Programs

This is a first draft of MyLife Grant Preparedness documentation regarding the projects and programs for which we will seek funding. The board is requested to use this document to determine

MyLife Mission

MyLife is how humans of the 21st Century will be remembered. MyLife is committed to providing humanity a durable, enduring and free internet-based intelligent platform to preserve an individual's digital legacy for posterity. Be remembered.

MyLife Pillars

- Intelligence Democratization
- Intelligent Self-Empowerment
- Digital Dignity, Equity and Justice
- Intelligent Human-Centric Network

Projects and Programs

This is the first draft of a way to categorize and think about the grant program ideas we can devise. This version intends to be presented to the board regarding our grant preparedness initial consult.

Here are the fundamental Guiding Lights when prioritizing with the board.

- What we need to get paid for?
- How much does it cost?
- How are we benefitting the community-at-large?

MyLife Grant Dimensions

We identify 4 dimensions along which we understand how to classify and organize our grant materials as well as grant *outcomes*.

- Research
- Technical
- Education
- Outreach

Research Definition

This section focuses on projects that haven't been constructed yet and are in ideation phase; it can also be a post-mortem on current functionality. In either case, we would expect as an outcome some yield to go into technical specifications for further evolution of the platform.

- Feasibility Studies & Exploratory Research
- Technical Standards & Frameworks
- Impact Studies

- Knowledge Dissemination: conference seminars, white papers, etc.

General advice: Let the market decide, we have wide lenses - look for affinity and collaboration as there are a great number of vantages through which to look for synchrony.

Technical Definition

In the **Technical** category, I am focused on the following type of engineering projects that have technical specifications prepared, be they loose in GitHub or far more precise.

- Platform Development
- Infrastructure
- Systems Upgrades
- Pilot Implementations & Releases

Education Definition

Here I'm thinking of the following types of outcomes:

- Published white papers, manuals, or toolkits
- Online/multimedia courses
- Workshops, seminars, or conference presentations
- Assessment reports tracking educational impact

The fields of focus therefore might be: Informational Content Creation, Professional Development, and Public Awareness

Outreach Definition

Board Development (pre-bootcamp) is not dependent on these, but opens access to the possibility of increasing size and diversity of person and mind. Here will we focus on opportunities around:

- Community Building & Membership
- Awareness & Advocacy
- Partnership & Network Building
- Marketing & Communications

The type of deliverables I expect in this category are things like:

- Public-facing events or workshops with measurable attendance/impact
- Partnerships with nonprofits, local organizations, or industry leaders
- Volunteer programs or advisory boards for sustained engagement
- Comprehensive outreach strategies or communication plans

MyLife Programs

Below are the programs, sometimes projects, that are capable of being stretched along the 4 dimensions mentioned above.

MyLife Alpha Program

Refers to the fully manifest product "currently"

MyLife Beta Program

Refers to upcoming Beta project, itself including Development, Security Improvements, UI/UX, mobility, QA, feedback, and more

Digital Legacy Management

From time-capsules as functionality to improved member experiences, to education about, includes

Data and Knowledge Ownership

Concepts and technology around ensuring security around individual data so that individuals can deploy their own data to their own compensation

DAO AI Governance

MyLife organizational structure intentionally evolving to manage mass multi-stakeholder voting and guidance process

Privacy and Security

Platform security, Individual privacy, consensual privacy, and larger concepts like an Artificial Intelligence Governance Framework

Decentralization

Platform, AI, LLMs (aggregator, interoperable), database, concept, technical work

Human-Generated Content Marketplace/UBI

relating to data marketplaces, member compensation

Ethical AI

Human Centric Design, Affinity, Security, Collaboration, Digital Dignity, Equity and Justice, Responsible AI

Creative Experiences

Executive Search

- Volunteer Recruitment

Mission-Aligned Partnerships

- Network Building
- Marketing

Research Programs

MyLife Alpha (Research)

- Human-centric Feedback, Diagnostics

MyLife Beta (Research)

- Metrics Tracking
- "Business Intelligence" intelligent layer
- AI-to-AI Contract Communication
- AI Security for Marketplace Engagement

Digital Legacy Management (Research)

- Published Assets
- API Documentation
- Standards Proposals

DAO Governance with AI (Research)

- Feasibility Studies
- Technical Standards & Frameworks

Human-Generated Content Marketplace/UBI (Research)

- Technical Standards & Frameworks for User-Centric Micro-Payments
 - **Concept:** Develop and test open standards that allow seamless, low-cost micro-payments to creators for their contributions (text, images, art, etc.).
 - **Key Activities**
 - Research existing frameworks (blockchain-based micropayments, fiat microtransactions, NFT licensing).
 - Engage stakeholders (developers, artists, policymakers) to design interoperable protocols and fair licensing models.
 - Draft technical reference implementations or APIs.
 - **Potential Outcomes**
 - Open-source tools or libraries documenting best practices for implementing secure, frictionless micropayment systems.
 - Industry workshops or consortium-driven standard-setting events to encourage widespread adoption.
- Feasibility Study on a Human-Generated Content UBI Model
 - **Concept:** Investigate whether a marketplace for user-generated content can provide a viable path to Universal Basic Income. Examine economic models, tokenomics, and platform dynamics.
 - **Key Activities**
 - Assess micro-transaction systems, royalty splits, and revenue-sharing approaches.
 - Conduct pilot studies or simulations with real user participation.
 - Evaluate legal, regulatory, and technological barriers.
 - **Potential Outcomes**
 - Evidence-based white paper or toolkit summarizing viability, challenges, and recommended next steps.

- Foundation for large-scale pilot or pilot expansions in collaboration with partners (e.g., technology providers, local communities).
- Impact Study on Equitable Content Compensation
 - **Concept:** Measure how equitably a human-generated content marketplace distributes earnings, especially among marginalized creators. Explore how it impacts socio-economic disparities or fosters new economic opportunities.
 - **Key Activities**
 - Collect data from creators (income levels, demographics, content types) to analyze distribution patterns.
 - Examine social and community impacts, including whether the system encourages collaboration or deepens existing inequalities.
 - Interview key stakeholders, including platform operators, creators, and end-users.
 - **Potential Outcomes**
 - Robust research report or policy brief identifying success factors and pitfalls in marketplace design.
 - Recommendations for policy or platform adjustments to enhance inclusion, equity, and user empowerment.
- Pilot Collaboration with Existing Creator Platforms
 - **Concept:** Partner with established social media or content-creation platforms to test research-driven UBI models (e.g., partial revenue sharing, token-based rewards).
 - **Key Activities**
 - Integrate a pilot revenue-sharing mechanism into a small subset of platform users.
 - Collect real-time data on user engagement, satisfaction, and perceived fairness.
 - Analyze whether the shift in compensation structure changes behavior, retention, or content quality.
 - **Potential Outcomes**
 - Detailed pilot study results showing potential adoption barriers, user acceptance rates, and monetization effectiveness.
 - Framework for scaling the approach across larger user bases or additional platforms.

Privacy and Security (Research)

- Published Assets
- Standards Proposals

Ethical AI (Research)

Human-Centric Architecting, Engineering and Development

- Published Assets
- Standards Proposals
- API Documentation

Creative Works (Research)

Solutions for Copyright and Public Dissemination

- Published Assets

- API Documentation

Technical Programs

MyLife Alpha (Technical)

Intelligence Democratization, Intelligent Self-Empowerment

- Scaling
- Pipeline
- Security Improvements (Gypsum)
- Routine/Alpha-Dog Improvements
- Testing

MyLife Beta (Technical)

Intelligence Democratization, Intelligent Self-Empowerment

- improve sharing memories
- Communal sharing of memories (!)
- Dynamic Experiences
- LLM Bias-detection (cultural outreach project-specific)
- Scaling
- Pipeline
- Security Improvements (Gypsum)

Digital Legacy Management (Technical)

- Demonstrate Current Member Avatar Engineering
- Document Current Engineering around Lockbox/Time Capsule
- Partner/lease technology
- Begin Specifications to Develop

Privacy and Security Updates (Technical)

- Demonstrate Current Engineering
- Document Current Engineering
- Begin Specifications to Develop

Data Ownership (Technical)

- Begin technical documentation of engineering and Design

DAO Governance with AI (Technical)

- Begin technical documentation of engineering and Design

Platform Decentralization (Technical)

- Begin technical documentation of engineering and Design

Educational Programs

MyLife Alpha Educational Programs

- Ethical
- Technical
 - Professional Toolkit for AI Enthusiasts
- Usage
 - Collecting Memories: any, focus on elderly
 - Improving Memory: archivists, creatives
 - Reliving Memories: therapeutic (? research)
 - Sharing Memories: network, legacy, enthusiast

MyLife Beta Educational Programs

- Ethical
- Technical
 - Professional Experience with LLM platform
- Usage
 - As Alpha
 - Communal Memories
 - Dynamic Experiences (creatives)

Digital Legacy Educational Programs

- White Paper: "Understanding Digital Legacy in the 21st Century"
 - Format: A professionally formatted document for broad distribution
 - Focus: Defining Digital Legacy – Clarify key terms, concepts, and real-world examples
 - Legal and Ethical Dimensions – Provide an overview of personal data rights, estate planning considerations, and future implications.
 - Why MyLife? – Highlight MyLife's human-centric intelligent platform and how it addresses emerging digital legacy challenges.
 - Outcome: A reference document that educates stakeholders (users, academics, policymakers) on the importance of preserving one's digital presence and how MyLife offers unique advantages.
- User Guide & Toolkit: "Managing Your Digital Legacy with MyLife"
 - Format: Printable or downloadable manual plus interactive checklists
 - Focus:
 - Step-by-Step Management – Walk users through MyLife's tools, from account setup to selecting privacy settings and deciding on legacy permissions.
 - Value Proposition – Outline MyLife's core features (consent frameworks, AI-driven archiving, user empowerment).
 - FAQ & Best Practices – Address common questions (security concerns, data usage, ownership) and offer tips for long-term planning.
 - Outcome: Practical guidance that empowers individuals to start building and maintaining a robust digital legacy, highlighting MyLife's difference.

- Online Courses & Multimedia eLearning Series
 - Format: Self-paced modules or short video tutorials
 - Focus: What Is Digital Legacy? – Introduce the concept with compelling stories, statistics, and case studies.
 - MyLife Basics – Tutorials on navigating the platform, using AI tools, and customizing user preferences.
 - Ethical & Cultural Perspectives – Invite expert speakers to discuss the global implications of digital legacy, especially how various cultures handle memories and inheritance.
 - Outcome: Accessible, interactive learning that accommodates different learning styles, fosters digital literacy, and frames MyLife as a trustworthy, user-focused service.
- Workshops, Webinars, or Conference Presentations
 - Format: Live or virtual sessions in collaboration with libraries, universities, or tech conferences
 - Focus:
 - Digital Legacy 101 – Introduce participants to concepts like data inheritance, privacy, and the ethical responsibilities of storing personal memories online.
 - Managing with MyLife – Demonstrate platform features and answer real-time questions on functionality, trust, and potential use cases.
 - Why MyLife? – Make the case for a human-centric approach: a platform built on consent, empathy, and collaborative knowledge.
 - Outcome: Immediate engagement with target audiences; builds credibility, community awareness, and user confidence in the MyLife platform.
- Assessment & Impact Reporting
 - Format: Evaluation framework or outcome-based studies
 - Focus:
 - Measuring Educational Impact – Track user comprehension before and after workshops or courses (e.g., use surveys or quizzes).
 - Platform Adoption Metrics – Assess how many participants start using MyLife or share it with family and friends.
 - Long-Term Behavior Changes – Analyze if participants develop ongoing habits of digital content archiving, privacy optimization, and estate planning.
 - Outcome: Data-driven insights that demonstrate the value of educational initiatives, help refine content, and guide resource allocation for future projects.

Data and Knowledge Ownership Educational Programs

- What is it in the age of AI?
- How does MyLife secure your rights?

Privacy and Security Practices with AI Educational Programs

- What is it in the age of AI?
- How to Protect Yourself
- How does MyLife secure your rights?

Ethical AI Educational Programs

- What is it in the age of AI?

- Who cares? (Who's doing it)
- How to engineer responsibly
- How to organize responsibly

Human-Centric Design Educational Programs

- What it means (human-first, unexploited, untheived)
- How MyLife does it, both architecturally, technically and with design

Creative Works Educational Programs

- Solutions for Copyright
- AI as a tool for interactive intelligent media
- Audience as Collaborator

Outreach Programs

MyLife Alpha (Outreach)

- Increased Membership
- Ethics Model Prototype

MyLife Beta (Outreach)

- Engagement with advisory boards
- focus groups
- communities

Digital Legacy Management (Outreach)

- Webinar series
- Ambassadors/Volunteers
- Membership
- Social Media
- Partnerships
 - historical societies
 - community centers
 - retirement communities
- Public Awareness
- Community Building
- Network Building
- Marketing

Data and Knowledge Ownership (Outreach)

- Own Your Data, Own Your Future (Seminars/Talks/Workshops)
 - Begin Speaking Deck for topic
- Podcast (Webinar series)

- **Concept:** Produce a regular series featuring experts in law, tech, and activism to discuss current events, breakthroughs, and user-friendly tools for data management.
- **Goal:** Provide ongoing, accessible education and insights to a broad audience, fostering a culture that values data autonomy and personal empowerment.
- Community Data Clinics (Public Awareness)
 - **Concept:** Set up weekly or monthly clinics at libraries, community centers, or universities where individuals can receive hands-on help with privacy settings, data backup, and personal data audits.
 - **Goal:** Provide practical support for those looking to secure or manage their digital assets, while educating participants on best practices and existing legal protections.
 - **Notes:** CoFlow in Beverly has space and time and we could host an in-situ clinic

DAO Governance with AI (Outreach)

- Advisory Board

Privacy and Security Practices with AI (Outreach)

- Advisory Board
- Webinars
- Open Community Shaping

Platform Decentralization (Outreach)

- Advisory Board
- Community

Executive Search (Outreach)

- Volunteer Recruitment

Mission-Aligned Partnerships (Outreach)

- Network Building
- Marketing
